Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

-----

NOTICE: This sequence may not represent the entire insert of this  
clone. It may be shorter because we only sequence overlapping  
clone sections once, or longer because we provide a small overlap  
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate  
chemistry, or covered by high quality data (i.e., phred quality >=  
30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by sequence  
from more than one subclone; and the assembly was confirmed by  
restriction digest.

MAPPING INFORMATION:  
Mapping information for this clone was provided by Dr. John D.  
McPherson, Department of Genetics, Washington University, St. Louis  
MO. For additional information about the map position of this  
sequence, see <http://genome.wustl.edu/gsc>

SOURCE INFORMATION:  
The RPCI-11 human BAC library was made from the blood of one male  
donor, as described by Osoegawa,K., Moon,P.Y., Zhao,B., Frenken,E.,  
Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved  
approach for construction of bacterial artificial chromosome  
libraries. Genomics 51:1-8. The clone may be obtained either from  
Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong  
and coworkers at <http://www.chori.org>  
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:  
The clone sequenced to the right is RP11-172J1, 2000 bp overlap.  
Actual start of this clone is at base position 1 of RP11-561A13.

Single plasmid regions exist between 126567 and 126760; 141430 and  
141464; 105109 and 105130. Polymorphisms exist between AC06051 and  
AC107218.

## COMMENT

This sequence is a seven transmembrane helix receptor candidate  
predicted from the whole human genome sequences using our automated  
system that contains programs of gene  
finding (GeneDecoder), sequence search, motif-domain assignment and  
transmembrane helix prediction.  
And the sequence is submitted by the collaborative project between  
[Computational Biology Research Center (CBRC), National Institute  
of Advanced Industrial Science and Technology (AIST)] and [Genome  
Science Division, Research Center for Advanced Science and  
Technology (RCAST), University of Tokyo].

DEFINITION
AF363578      347253 bp      DNA      linear      PRI 27-DEC-2001
Homo sapiens ATPase H+ transporting lysosomal protein (ATP6C) gene,
complete cds; BAluC (BAluC) gene, complete cds, alternatively
spliced; and frizzled-like protein 6 (FZD6) gene, complete cds.
AF363578
AF363578.1 GI:17979892
SOURCE
ORGANISM
Homo sapiens.
Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Homnidae; Homo.

Sequencing of the human chromosome 14

Unpublished

Genoscope. 2 (bases 1 to 201587)

Direct Submission

Submitted (26-APR-2001) Genoscope - Centre National de Sequencage ;

BP 191 91006 Evry cedex - FRANCE (E-mail : sequef@genoscope.cns.fr)

- Web : www.genoscope.cns.fr

On Apr 27, 2001 this sequence version replaced gi:12140284.

----- Genome Center

Center: Genoscope / Centre National de Sequencage

Center code: GS

Web site: http://www.genoscope.cns.fr/

Contact: Sequef@genoscope.cns.fr

-----

The following BAC sequence is oriented from the T7 to the SP6 end.

Upstream BAC (overlapping the T7 end) : R-543C4

Downstream BAC (overlapping the SP6 end) : R-436M15 (AC=AL133368)

----- Summary Statistics

Assembly program: Phrap; version 2.0

Quality coverage: 5.88x in Q20 bases; sum-of-configs

-----

Overall quality chart :

\* NOTE: Estimated insert size may differ from sequence length  
\* (see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 59 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

Project Information  
Center project name: KAHK  
Center clone name: CH230-383J24  
Sequencing vector: Plasmid  
Chemistry: Dye-terminator Big Dye 100% of reads  
Assembly program: Phrap, version 0.990329  
Consensus quality: 131956 bases at least Q40  
Consensus quality: 138984 bases at least Q30  
Consensus quality: 143260 bases at least Q20  
NOTE: Estimated insert size may differ from sequence length  
(see http://www.hgsc.bcm.tmc.edu/docs/Gendbankdraft\_data.html).  
NOTE: This is a 'working draft' sequence. It currently  
consists of 45 contigs. The true order of the pieces  
is not known and their order in this sequence record is  
arbitrary. Gaps between the contigs are represented as  
runs of N, but the exact sizes of the gaps are unknown.  
This record will be updated with the finished sequence  
as soon as it is available and the accession number will  
be preserved.

Summary Statistics
Consensus quality: 89384 bases at least Q40
Consensus quality: 90516 bases at least Q30
Consensus quality: 90668 bases at least Q20
Estimated insert size: 97000; agarose-fp estimation
Estimated insert size: 91076; sum-of-contigs estimation
Quality coverage: 10.84 in Q20 bases; agarose-fp estimation
Quality coverage: 11.54 in Q20 bases; sum-of-contigs estimation.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 35158: contig of 35158 bp in length
* 35159 35258: gap of unknown length
* 35259 55749: contig of 20491 bp in length
* 55750 55849: gap of unknown length
* 55850 91276: contig of 35427 bp in length.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

/note="Vector: pBluescript PSK; Site\_1: EcoRI; Site\_2:  
XhoI; Plants were grown in an aeroponic chamber on  
nitrogen-rich medium for 21 days. Three days before  
inoculation with Sinorhizobium meliloti, the medium was  
replaced by N-free medium. Root nodules (+ short adjacent  
root segments) were harvested 4 days post inoculation.  
cDNA was prepared from polyA+ enriched RNA. The cDNA was  
directionally ligated into Uni-zap XR vector from  
Stratagene and packaged using Gigapack Gold packaging  
extracts. Plasmids containing cDNA inserts were  
mass-excised from phage stocks using Exasit helper phage  
and propagated in SOLR cells. Clone ordering and  
sequencing was performed by the Centre National de  
Sequencage (Genoscope, Evry, France)."

XhoI; Tissue supplied by Christian Bachem and Richard  
Visser (Department of Plant Breeding, Wageningen  
University, The Netherlands); sequencing by The Institute  
for Genomic Research. The cDNA libraries will attempt to  
capture the induction and initiation/initial growth of the  
tuber in an in vitro system as described in Bachem et al.  
(Plant Journal, 1996). Small microtubers develop from  
axillary buds attached to stem explants when placed on a  
high sucrose medium (10%). Visible morphological changes  
occur synchronously at day five in the axillary buds. The  
first library, cSTA (1-20) consists of axillary buds  
harvested on days 1-3. This targets those genes involved  
in induction of the microtubers. The following libraries,  
cSTA (21-40) and cSTA (41-60), capture genes involved in  
tuber initiation and outgrowth. This library is noted as  
P3 in Tanksley lab notebooks."

COMMENT This GSS is part of a random genomic sequencing program of thirteen  
yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces  
exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,  
Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces  
lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia  
agustae, Debaryomyces hansenii var. hansenii, Pichia sorbitophila,  
Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to  
5 kb were prepared and both extremities were sequenced. See  
keywords for description of this sequence and for the sequence of  
the other extremity of this insert.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

PT	New vaccine for treatment of Schistosoma infections contains a
PT	recombinant fusion protein comprising cercarial elastase fused
PT	to bacterial, phage or viral protein -
XX	
PS	Claim 2; Fig 1; 26pp; English.
XX	
CC	The invention provides a vaccine comprising a recombinant fusion protein
CC	capable of eliciting immunity against Schistosoma parasites. The fusion
CC	protein comprises the 27 or 28 kDa cercarial elastase sequence of
CC	S. mansoni or an active fragment, homologue or variant, fused to a
CC	bacterial, phage or viral protein. The vaccine containing the fusion
CC	protein has been found to induce a significantly increased antibody
CC	response against schistosoma infections, compared to the use of S.
CC	mansoni cercarial elastase in its native form. The present sequence
CC	represents the S. mansoni cercarial elastase gene.

XX Six hundred and twenty three polynucleotides derived from a variety of  
PT human tissue sources which encode secreted proteins, useful for  
PT treating immune deficiencies and disorders such as autoimmune disorders  
PT  
XX  
PS Claim 1; Page 151-152; 393pp; English.  
XX  
XX The present invention relates to the isolation of novel cDNA sequences  
CC which encode human secreted proteins. The cDNA sequences have been  
CC derived from a variety of human tissues. The invention also provides  
CC a method for producing proteins from these polynucleotide sequences.  
CC The proteins are useful for identifying compounds that modulate their  
CC activity and production. The sequences of the invention are  
CC useful for treating diseases such as hyperproliferative disorders  
CC (e.g. cancer), immune deficiency disorders (e.g. severe combined  
CC immunodeficiency (SCID), autoimmune disorders (e.g. multiple  
CC sclerosis), blood disorders (e.g. thrombocytopenia), inflammatory  
CC disorders (e.g. arthritis), infectious disorders (e.g. hepatitis),  
CC allergic conditions (e.g. asthma), neurodegenerative disorders (e.g.  
CC Alzheimer's disease), liver fibrosis, coagulation disorders (e.g.  
CC haemophilia), and tumours. The polynucleotide sequences of the  
CC invention are also useful in gene therapy. ABK35610-ABK36232 represent  
CC the cDNA sequences of the invention that encode for novel human  
CC secreted proteins.

XX New human receptor proteins, used e.g. to treat, prevent and  
PT diagnose gastrointestinal and developmental disorders - and related  
PT nucleic acids, vectors, transformed cells, antibodies, agonists and  
PT antagonists  
XX  
PS Claim 11; Page 87-88; 94pp; English.  
XX  
XX This is the consensus sequence for Human receptor protein 2 (HURP-2). It  
CC was derived from the following overlapping and/or extended nucleic acid  
CC sequences; Incyte clones 150629 (FIBRANT01), 639489 (BRSTN0703), 878146  
CC (LUNGAST01), 995140 (KIDNUT01), and shotgun sequences SAAB00536  
CC and SAIA03775.  
CC HURP-2 is expressed in cancerous, inflamed, fetal/proliferating, and  
CC reproductive tissue. HURP-2 therefore appears to have a role in some  
CC forms of cancer, autoimmune/inflammatory disorders, reproductive  
CC disorders, and developmental disorders.  
CC This gives rise to the possibility of using an antagonist or an antibody  
CC of HURP to treat or prevent cancer or autoimmune/inflammatory disorders.

 XX Composition having probes which comprise part of gene sequence encoding  
 PT proteins associated with cell proliferation useful as hybridizable  
 PT array elements in Microarrays to monitor expression of target  
 PT polynucleotide -  
 PS  
 PS Claim 1; Columns 57-60; 104pp; English.  
 XX  
 XX The present invention relates to a composition comprising several  
 CC polynucleotide probes. Probes can be derived from the present sequence.  
 CC The probes are immobilised and are preferably useful as hybridisable  
 CC array elements in a microarray for monitoring the expression of several  
 CC polynucleotides. The microarray can be used in the diagnosis of cancers  
 CC such as adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma  
 CC and teratocarcinoma etc., immunopathology such as AIDS, Addison's  
 CC disease, adult respiratory distress syndrome, allergies, anaemia, asthma,  
 CC atherosclerosis and bronchitis etc., neuropathology such as Alzheimer's  
 CC disease, amnesia, amyotrophic lateral sclerosis, bipolar disorder,  
 CC catatonia and cerebral neoplasms etc. The microarray can also be used to  
 CC investigate an individual's predisposition to a disease such as cancer,  
 CC immunopathology or neuropathology. Also, the microarray can be used for  
 CC investigating cellular response to infection, drug treatment etc. The  
 CC microarray can be used for diagnostics, prognostics and treatment  
 CC regimens, drug discovery and development, toxicological and  
 CC carcinogenicity studies, forensics, pharmacogenomics etc. The array can  
 CC also be used for monitoring disease progression.

 XX New nucleic acid encoding human frizzled-6 protein - used to treat,  
 PT prevent and diagnose e.g. infections, pain, cancer, diabetes,  
 PT obesity, anorexia, bulimia, asthma, Parkinson's disease, heart  
 PT failure, hypertension and hypotension  
 XX  
 XX Claim 2; Page 7-8; 24pp; English.  
 XX  
 XX This sequence encodes the human frizzled-6 protein of the invention. The  
 CC protein is a member of the G-protein coupled receptor (also known as 7TM  
 CC receptor) family, and has homology to the murine frizzled-6 protein.  
 CC Cells containing the DNA are used to express the protein, which is useful  
 CC for therapy, in drug screens and to raise antibodies (Ab) (including use  
 CC in vaccines). The protein or its agonists, or the DNA, are used to treat  
 CC or prevent diseases requiring increased activity or expression of  
 CC hFrizzled-6, while antagonists are used similarly where reduction in  
 CC activity or expression of the protein is required. Suitable diseases for  
 CC treatment are bacterial, fungal, protozoal or viral infections  
 CC (particularly by human immune deficiency virus), pain, cancer, diabetes,  
 CC obesity, anorexia, bulimia, asthma, Parkinson's or Huntington's diseases,  
 CC acute heart failure, hypo- or hyper-tension, urinary retention,  
 CC osteoporosis, angina pectoris, myocardial infarction, ulcers, allergy,  
 CC benign prostatic hypertrophy and psychotic or neurological disorders  
 CC (e.g. anxiety, schizophrenia and manic depression). These diseases, or  
 CC susceptibility to them, can be diagnosed by detecting a mutation in a  
 CC gene encoding hFrizzled-6 and/or by measuring levels of the protein or  
 CC associated RNA in a patient sample. Fragments of the DNA are useful as  
 CC hybridisation probes for isolating genomic and related sequences, as  
 CC diagnostic reagents (in standard amplification or hybridisation assays)  
 CC and for chromosome identification. Ab are used as immunoassay reagents,  
 CC for therapy, to identify hFrizzled-6-expressing clones and for affinity  
 CC purification.

 PT Determining the degree of cytosine methylation in genomic DNA, useful  
 PT for diagnosis and prognosis, comprises selective hybridization of  
 PT amplicons from chemically treated DNA -  
 XX  
 PS Claim 12; 56bp + Sequence Listing; 56bp; German.  
 XX  
 CC This invention describes a novel method for determining the degree of  
 CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a  
 CC genomic sample of DNA. The sample is treated chemically to convert  
 CC cytosine (C) but not methylated C, to uracil, then part of the genomic  
 CC DNA that contains the target C is amplified to form a labeled amplicon.  
 CC The amplicon is hybridised to two classes, each with at least one  
 CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers  
 CC and the degree of hybridisation to both classes is determined from the  
 CC label on the amplicon. From the ratio of labels hybridised to the two  
 CC classes of oligomers, the degree of methylation is calculated. The method  
 CC is used: (i) for diagnosis and/or prognosis of side effects of  
 CC therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders  
 CC of the central nervous, cardiovascular, gastrointestinal and respiratory  
 CC systems etc., particularly by detecting mutations or single nucleotide  
 CC polymorphisms (SNP's); and (ii) for differentiation of cell or tissue  
 CC types and for investigating cell differentiation. The method allows the  
 CC methylation status of many C residues to be determined simultaneously.  
 CC ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the  
 CC method for determining the degree of cytosine methylation described in  
 CC the disclosure of the invention.

 XX  
 CC Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA  
 CC molecules associated with the cell cycle and specific PCR primers of the  
 CC invention. The sequences are useful for detecting the methylation state  
 CC of all CpG dinucleotides in a sequence and therefore for analysing  
 CC associated diseases. By analysing cytosine methylations in the pretreated  
 CC DNA, genetic and/or epigenetic parameters for the diagnosis and therapy  
 CC of existing diseases or the predisposition to specific diseases can be  
 CC ascertained. The parameters may be compared to another set of genetic  
 CC and/or epigenetic parameters, the differences serving as basis for  
 CC diagnosis and/or prognosis events which are disadvantageous to patients.  
 CC The sequences of the invention are useful for the diagnosis and therapy  
 CC of HIV infection, neurodegenerative disorders, graft-versus-host disease,  
 CC aging, glomerular disease, Lewy body disease, arthritis,  
 CC arteriosclerosis, solid tumours and cancers.

XX Novel nucleic acid useful for diagnosis and therapy of diseases

PT associated with development genes such as diabetes, comprises a

PT sequence of a segment of chemically pretreated DNA of genes associated

PT with development

XX Claim 1; SEQ ID NO 196; 27pp; English.

XX The invention relates to a nucleic acid (I) comprising a sequence at

CC least 18 bases in length of a segment of chemically pretreated DNA (II)

CC of genes associated with development selected from 87 genes listed in

CC the specification such as ACCPN, ADPN, or APDI and comprising one of 350

CC sequences (ABN79984-ABN80333) or their complements. The invention is

CC useful for the diagnosis or therapy of diseases associated with

CC development genes, in particular disease related to homeobox containing

CC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes

CC associated with congenital heart disease, epilepsy, diseases related to

CC histone deacetylation, Currarino syndrome, diseases related with the

CC development of the brain and limb girdle muscular dystrophy and dwarfism.

CC Oligomers specific to each of the genes are useful for detecting the

CC methylation state of all CG dinucleotides within the 350 sequences or

CC (II) and their complementary sequences, as primer oligonucleotides for

CC the amplification of the 350 sequences, (II) and/or their complements and

CC as oligomer probes for detecting the cytosine methylation state and/or

CC single nucleotide polymorphisms (SNPs).

CC Note: The sequence data for this patent did not form part of the printed

CC specification but is based on sequence information supplied to Derwent by

CC the European Patent Office.

XX Olek A, Piepenbrock C, Berlin K;

PI WPI; 2002-090046/12.

XX New nucleic acids or oligomers, useful for diagnosing or treating

PT diseases associated with DNA transcription, e.g. immunological

PT disorders, Werner syndrome, psoriasis, myocardial infarction, solid

PT tumours or cancer

XX Claim 1; SEQ ID NO 110; 33pp; English.

XX The invention relates to a nucleic acid, which comprises a segment of the

CC chemically pretreated DNA of genes associated with DNA transcription from

CC one of 346 sequences, and an oligomer, in particular an oligonucleotide

CC or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical

CC to the chemically pretreated DNA of genes associated with DNA

CC transcription. The set of oligomer probes are useful for detecting the

CC cytosine methylation state and/or single nucleotide polymorphisms (SNPs)

CC in a chemically pretreated genomic DNA. The nucleic acids are useful for

CC diagnosing or treating diseases associated with DNA transcription

CC (particularly with the methylation status), e.g. adenosine deaminase

CC deficiency, viral infection, retroviral infection, Sezary syndrome,

CC haematological disorders, immunological disorders, Werner syndrome,

CC tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,

CC neurological disorders, neurodegenerative disorders, Waardenburg

CC syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial

CC infarction, hypertension, angiodysplasia, erythropoiesis, congenital heart

CC disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours

CC or cancer. Sequences ABK28127-ABK28472 represent DNA transcription

CC associated genomic DNA molecules of the invention.

 PT Polynucleotides encoding diagnostic and therapeutic proteins, e.g.  
 PT enzymes, hormones and receptors, useful in diagnostics and therapeutics  
 PT  
 PS  
 PS Claim 1; Page 369; 522pp; English.  
 XX  
 CC The invention relates to polynucleotides (I) encoding diagnostic and  
 CC therapeutic (DTRP) polypeptides (II), which include e.g. enzymes,  
 CC and proteins involved in growth and development and receptors. (I) and  
 CC (II) may be used in the prevention, diagnosis and treatment of diseases  
 CC associated with inappropriate DTRP expression. For example, (I) and  
 CC (II) may be used to treat disorders associated with decreased polypeptide  
 CC expression by rectifying mutations or deletions in a patient's genome,  
 CC that affect the activity of the DTRPs, by expressing inactive proteins  
 CC or supplementing the patient's own production of them. (I) and (II)  
 CC may be used to treat diseases, for example, cell proliferative disorder,  
 CC Crohn's disease, acquired immune deficiency syndrome (AIDS), lymphoma,  
 CC leukaemia, autoimmune disorders, and respiratory disorders. Additionally,  
 CC (I) may be used to produce the DTRPs, by inserting the nucleic acids  
 CC into a host cell and culturing the cell to express the protein. (I) and  
 CC its complementary sequences may also be used as DNA probes in diagnostic  
 CC assays to detect and quantitate the presence of similar nucleic acids in  
 CC samples, and therefore which patients may be in need of restorative  
 CC therapy. (II) may also be used as antigens in the production of  
 CC antibodies against DTRPs and in assays to identify modulators of DTRP  
 CC expression and activity. The anti-DTRP antibodies and antagonists may  
 CC also be used to down regulate expression and activity. The anti-DTRP  
 CC antibodies may also be used as diagnostic agents for detecting the  
 CC presence of DTRPs in samples (e.g. by enzyme linked immunosorbent  
 CC assay (ELISA)). AAS30986-AAS31196 represent human diagnostic and  
 CC therapeutic (DTRP) polynucleotides of the invention.

 XX  
 XX Claim 1; Page 341-342; 618pp; English.  
 PS  
 PS The invention relates to an isolated human disease detection and  
 PS treatment (MDRP) polypeptide (I) selected from a polypeptide having a  
 CC sequence selected from 254 sequences (ABP51231-ABP51484) given in the  
 CC specification, a naturally occurring polypeptide comprising a sequence  
 CC having at least 90% identity to (I) or a biologically active or  
 CC immunogenic fragment of (I). (I) is useful for screening a compound for  
 CC effectiveness as an agonist or antagonist, for screening a compound that  
 CC specifically binds (I) or modulates the activity of (I) and for  
 CC preparing a polyclonal or monoclonal antibody by hybridoma technology.  
 CC Nucleic acids (II) (ABQ72449-ABQ72700) encoding (I) are useful for  
 CC screening a compound for effectiveness in altering expression of a target  
 CC polynucleotide comprising. Oligonucleotides and antibodies are useful for  
 CC detecting MDRP in a sample or for assessing toxicity of a test compound,  
 CC in a diagnostic test for a condition or a disease associated with the  
 CC expression of MDRP in a biological sample, for detecting (I) in a sample,  
 CC and for purifying (I) from a sample. A composition comprising (I), an  
 CC agonist or antagonist is useful for treating a disease or condition  
 CC associated with decreased or increased expression of functional MDRP.  
 CC (I) or (II) are useful for diagnosing, treating or preventing disorders

CC associated with aberrant expression of MDT1, where the disorders are  
 CC selected from a cell proliferative disorder such as arteriosclerosis,  
 CC cirrhosis, hepatitis, psoriasis, and cancer and an  
 CC autoimmune/inflammatory disorder such as AIDS, Addison's disease,  
 CC allergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or  
 CC rheumatoid arthritis. (ii) are useful for creating knockin humanised  
 CC animals or transgenic animals to model human diseases. In somatic or  
 CC gemline gene therapy, to generate a transcript image of a tissue or cell  
 CC type, for detecting differences in the chromosomal location due to  
 CC translocation or inversion among normal, carrier or affected individuals  
 CC and as hybridisation probes for mapping naturally occurring genomic  
 CC sequences.

XX An isolated polynucleotide useful in diagnostics and therapeutics -

XX Claim 1; Page 493; 686pp; English.

CC The invention relates to human diagnostic and therapeutic (dlthp)  
 CC polynucleotides and their associated polypeptides (dlthp polypeptides).  
 CC The sequences of the invention are used in the treatment and diagnosis of  
 CC cell proliferative disorders (e.g. arteriosclerosis, cirrhosis), cancers  
 CC (e.g. tumours of the adrenal gland, bone, bone marrow, brain, breast,  
 CC cervix, kidney, lung, ovary, pancreas, prostate, skin, spleen, testis or  
 CC thymus), autoimmune/inflammatory disorders (e.g. asthma, bronchitis,  
 CC psoriasis, osteoporosis), viral infections, bacterial infections, fungal  
 CC infections, parasitic infections, developmental disorders (e.g. anaemia,  
 CC epilepsy), seizure disorders (e.g. cerebral palsy, spina bifida),  
 CC endocrine disorders (e.g. thrombosis, aneurysm), metabolic disorders  
 CC (e.g. obesity, diabetes), neurological disorders (e.g. stroke,  
 CC amyotrophic lateral sclerosis, multiple sclerosis), gastrointestinal  
 CC disorders (e.g. ulcerative colitis, lymphoma) and transport disorders  
 CC (e.g. myotonic dystrophy, catatonias, peripheral neuropathy). Sequences  
 CC ABK71535-ABK71809 represent human dlthp polynucleotides of the invention.

XX  
PT measure gene expression in human lung samples -  
XX  
XX Claim 4; SEQ ID No 18754; 634pp; English.  
XX  
XX The invention relates to a spatially-addressable set of single exon  
XX  
XX nucleic acid probes for measuring gene expression in a sample derived  
XX  
XX from human lung comprising single exon nucleic acid probes having one of  
XX  
XX 12614 nucleic acid sequences mentioned in the specification, or their  
XX  
XX complements or the 12387 open reading frames derived from the 12614  
XX  
XX probes. Also included are a microarray comprising the novel set of  
XX  
XX probes; the novel set of probes which hybridize at high stringency to a  
XX  
XX nucleic acid expressed in the human lung; measuring gene expression in a  
XX  
XX sample derived from human lung, comprising (a) contacting the array with  
XX  
XX a collection of detectably labeled nucleic acids derived from human lung  
XX  
XX mRNA, and (b) measuring the label detectably bound to each probe of  
XX  
XX the array; identifying exons in a eukaryotic genome, comprising  
XX  
XX (a) algorithmically predicting at least one exon from genomic sequences  
XX  
XX of the eukaryote; and (b) detecting specific hybridisation of detectably  
XX  
XX labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,  
XX  
XX having a fragment identical to the predicted exon, the probe is included  
XX  
XX in the above mentioned microarray; assigning exons to a single gene,

CC comprising (a) identifying exons from genomic sequence by the method  
CC above and (b) measuring the expression of each of the exons in several  
CC tissues and/or cell types using hybridisation to a single exon  
CC microarrays having a probe with the exon, where a common pattern of  
CC expression of the exons in the tissues and/or cell types indicates that  
CC the exons should be assigned to a single gene; a peptide comprising one  
CC of 12011 sequences, mentioned in the specification, or encoded by the  
CC probes/open reading frames (ORF). The probes are used for gene  
CC expression analysis, and for identifying exons in a gene, particularly  
CC using human lung derived mRNA and for the study of lung diseases  
CC such as asthma, lung cancer, chronic obstructive pulmonary disease  
CC (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary  
CC fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease,  
CC Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary  
CC haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomatosis,  
CC pulmonary alveolar proteinosis, Karsenger syndrome, fibrocystic  
CC pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension  
CC and hyaline membrane disease. The present sequence is a single exon  
CC probe open reading frame of the invention.  
CC Note: The sequence data for this patent did not form part  
CC of the printed specification, but was obtained in electronic  
CC format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

SQ Sequence 410 BP; 152 A; 73 C; 61 G; 124 T; 0 other;
XX
```

XX This invention describes a novel method for determining the degree of  
CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a  
CC genomic sample of DNA. The sample is treated chemically to convert  
CC cytosine (C) but not methylated C, to uracil, then part of the genomic  
CC DNA that contains the target C is amplified to form a labeled amplicon.  
CC The amplicon is hybridised to two classes, each with at least one  
CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers  
CC and the degree of hybridisation to both classes is determined from the  
CC label on the amplicon. From the ratio of labels hybridised to the two  
CC classes of oligomers, the degree of methylation is calculated. The method  
CC is used: (i) for diagnosis and/or prognosis of side effects of  
CC therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders  
CC of the central nervous, cardiovascular, gastrointestinal and respiratory  
CC systems etc.; particularly by detecting mutations or single nucleotide  
CC polymorphisms (SNPs); and (ii) for differentiation of cell or tissue  
CC types and for investigating cell differentiation. The method allows the  
CC methylation status of many C residues to be determined simultaneously.  
CC ABL03410-AB034121 represent genomic DNA sequences used to illustrate the  
CC method for determining the degree of cytosine methylation described in  
CC the disclosure of the invention.

XX  
XX New vascular endothelial growth factor protein, useful for treating or

PT preventing diseases associated with inappropriate angiogenesis activity  
PT such as cancer, rheumatoid arthritis, psoriasis and wounds -  
XX  
PS Claim 43; Fig 24; 127pp; English.  
XX  
CC This invention describes a novel vascular endothelial growth factor-X  
CC (VEGF-X) protein (1a) and its encoding polynucleotide (1ia) which has  
CC (VEGF-X), cytostatic, antirheumatic, antiarthritic, antipsoriatic and  
CC (VEGF-X) activity and acts as an angiogenesis and vascularization  
CC regulator. An antisense molecule of the invention is useful for treating  
CC or preventing cancer, rheumatoid arthritis, psoriasis and diabetic  
CC retinopathy by inhibiting angiogenic activity or inappropriate  
CC vascularization including formation and proliferation of new blood  
CC vessels, growth and development of tissues, tissue regeneration and organ  
CC and tissue repair in a subject. The products of the invention are useful  
CC for preparing medicaments for treating wounds such as dermal ulcers,  
CC pressure sores, venous sores, diabetic ulcers and burns and to promote  
CC skin graft growth, tissue repair, proliferation of new blood vessels,  
CC tissue regeneration and organ repair by promoting angiogenic activity or  
CC vascularization. This sequence encodes a human VEGF-X protein PDGF-like  
CC domain which can be expressed in E. coli systems and which is described  
CC in the method of the invention.

PT Determining the degree of cytosine methylation in genomic DNA, useful  
PT for diagnosis and prognosis, comprises selective hybridization of

PT amplicons from chemically treated DNA -  
XX  
XX Claim 12; 56pp + Sequence Listing; 56pp; German.  
XX  
CC This invention describes a novel method for determining the degree of  
CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a  
CC genomic sample of DNA. The sample is treated chemically to convert  
CC cytosine (C) but not methylated C, to uracil, then part of the genomic  
CC DNA that contains the target C is amplified to form a labeled amplicon.  
CC The amplicon is hybridised to two classes, each with at least one  
CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers  
CC and the degree of hybridization to both classes is determined from the  
CC label on the amplicon. From the ratio of labels hybridised to the two  
CC classes of oligomers, the degree of methylation is calculated. The method  
CC is used: (i) for diagnosis and/or prognosis of side effects of  
CC therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders  
CC of the central nervous, cardiovascular, gastrointestinal and respiratory  
CC systems etc., particularly by detecting mutations or single nucleotide  
CC polymorphisms (SNP's) and (ii) for differentiation of cell or tissue  
CC types and for investigating cell differentiation. The method allows the  
CC methylation status of many C residues to be determined simultaneously.  
CC ABQ1410-ABQ54121 represent genomic DNA sequences used to illustrate the  
CC method for determining the degree of cytosine methylation described in  
CC the disclosure of the invention.

Pred. NO. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Direct Submission  
Submitted (28-APR-1999) Drosophila Genome Center, Lawrence Berkeley  
Laboratory, MS 64-121, Berkeley, CA 94720, USA  
On Mar 17, 2000 this sequence version replaced gi:7159347.  
For further information about this sequence, including its location  
and relationship to other sequences, please visit our sequence  
archive Web site (<http://www.fruitfly.org/sequence/>) or send email  
to [bdgs@fruitfly.berkeley.edu](mailto:bdgs@fruitfly.berkeley.edu). All contigs in this submission meet

the following cutoffs: length >= 200 bases.

\* NOTE: This is a 'working draft' sequence. It currently consists of 103 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. \* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

 COMMENT  
 requests: clonerequests@sanger.ac.uk  
 On Dec 17, 2000 this sequence version replaced gi:11230433.  
 During sequence assembly data is compared from overlapping clones.  
 Where differences are found these are annotated as variations  
 together with a note of the overlapping clone name. Note that the  
 variation annotation may not be found in the sequence submission  
 corresponding to the overlapping clone, as we submit sequences with  
 only a small overlap as described above.  
 This sequence has been finished according to sequence map criteria  
 as follows. An attempt is made to resolve all sequencing problems,  
 such as compressions and repeats, but not necessarily within known  
 annotated repeat sequence elements. Where the sequence is  
 ambiguous, there is an annotation using the 'unsure' feature key.  
 The following abbreviations are used to associate primary accession  
 numbers given in the feature table with their source databases:  
 Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information  
 on the WORMPEP database can be found at  
 http://www.sanger.ac.uk/Projects/C/elegans/wormpep  
 LA16-303A1 is  
 part of a clone contig from the tip of the short arm of chromosome  
 16 spanning 2Mb of p13.3 (Higgs D.R., Flint J., Daniels R., MRC  
 Molecular Haematology Unit, Institute of Molecular Medicine, Oxford  
 (unpublished)), and is from the Los Alamos, flow sorted human  
 chromosome 16 libraries constructed by Norman Doggett  
 (unpublished). VECTOR: scos-1  
 IMPORTANT: This sequence is not the entire insert of clone  
 LA16-303A1. It may be shorter because we sequence overlapping  
 sections only once, except for a 100 base overlap.

FEATURES  
The true left end of clone LA16-303A1 is at 1 in this sequence. The true left end of clone LA16-333E1 is at 30129 in this sequence. The true right end of clone LA16-357D8 is at 1812 in this sequence.

## COMMENT

request: clonerequest@sanger.ac.uk  
On Apr 6, 2001 this sequence version replaced gi:11322236.  
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.  
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; information on the WORMPEP database can be found at [http://www.sanger.ac.uk/Projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/Projects/C_elegans/wormpep)  
LA16-357D8 is part of a clone contig from the tip of the short arm of chromosome 16 spanning 2Mb of p13.3 (Higgs D.R., Flint J., Daniels R., MRC Molecular Haematology Unit, Institute of Molecular Medicine, Oxford (unpublished)), and is from the Los Alamos flow sorted human chromosome 16 libraries constructed by Norman Doggett (unpublished). VECTOR: sCos-1  
IMPORTANT: This sequence is not the entire insert of clone LA16-357D8 it may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.  
The true left end of clone LA16-357D8 is at 1 in this sequence. The true left end of clone LA16-303A1 is at 3597 in this sequence. The true right end of clone LA16-320B12 is at 12990 in this sequence.

DEFINITION			Human DNA sequence from clone LA16-303A1 on chromosome 16, complete
ACCESSION			AL031704
VERSION			AL031704.24
KEYWORDS			GT:11878023
SOURCE			HTG.
ORGANISM			human.
REFERENCE			Homo sapiens
AUTHORS			Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
TITLE			Mammalia; Eutheria; Primates; Catarrhini; Homnidae; Homo.
JOURNAL			1 (bases 1 to 30228)
COMMENT			Lloyd, C.
			Direct Submission
			Submitted (16-DEC-2000) Sanger Centre, Hinxton, Cambridgeshire,
			CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk
			requests: clonerequests@sanger.ac.uk
			On Dec 17, 2000 this sequence version replaced gi:11230433.
			During sequence assembly data is compared from overlapping clones.
			Where differences are found these are annotated as variations
			together with a note of the overlapping clone name. Note that the
			variation annotation may not be found in the sequence submission
			corresponding to the overlapping clone, as we submit sequences with
			only a small overlap as described above.
			This sequence has been finished according to sequencing criteria
			as follows. An attempt is made to resolve all sequencing problems,
			such as compressions and repeats, but not necessarily within known
			annotated repeat sequence elements. Where the sequence is
			ambiguous, there is an annotation using the 'unsure' feature key.
			The following abbreviations are used to associate primary accession
			numbers given in the feature table with their source databases:
			Em; EMBL; Sw; SWISSPROT; Tr; TREMBL; Wp; WORMEP; Information
			on the WORMEP database can be found at
			http://www.sanger.ac.uk/Projects/C_elegans/wormep
			LA16-303A1 is
			part of a clone contig from the tip of the short arm of chromosome
			16 spanning 2Mb of p13.3 (Higgs D.R., Flint J., Daniels R., MRC
			Molecular Haematology Unit, Institute of Molecular Medicine, Oxford
			(unpublished), and is from the Los Alamos, flow sorted human
			Chromosome 16 libraries constructed by Norman Doggett
			(unpublished). VECTOR: scos-1
			IMPORTANT: This sequence is not the entire insert of clone

LA16-303A1 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone LA16-303A1 is at 1 in this sequence. The true left end of clone LA16-335B1 is at 30129 in this sequence. The true right end of clone LA16-337D8 is at 1812 in this sequence.

PT	New vaccine for treatment of Schistosoma infections contains a
PT	recombinant fusion protein comprising cercarial elastase sequence fused
PT	to bacterial, phage or viral protein -

XX Claim 3; Page 17; 26pp; English.  
PS  
XX The invention provides a vaccine comprising a recombinant fusion protein  
CC capable of eliciting immunity against Schistosoma parasites. The fusion  
CC protein comprises the 27 or 28 kDa cercarial elastase sequence of  
CC S. mansoni or an active fragment, homologue or variant, fused to a  
CC bacterial, phage or viral protein. The vaccine containing the fusion  
CC protein has been found to induce a significantly increased antibody  
CC response against schistosoma infections, compared to the use of S  
CC mansoni cercarial elastase in its native form. The present sequence  
CC represents the S. mansoni cercarial elastase protein fragment encoded by  
CC exon 2 of the cercarial elastase gene, used in the fusion protein of the  
CC invention.

PT New compositions containing tryptase-7, e.g. mouse mast cell  
PT protease-7 - are used to treat clot formation in e.g. myocardial  
PT infarction, reocclusion following angioplasty or pulmonary  
PT thromboembolism

XX Disclosure; Page 70-71; 92pp; English.  
PS  
XX This is the deduced amino acid sequence of mouse mast cell protease  
CC 6 (mMCP-6) (see also AAV44332-33). The invention provides:  
CC compositions comprising an isolated tryptase-7 (such as mMCP-7, see  
CC AAW64233); a method for treating a blood clot by administering a  
CC nucleic acid molecule that codes for a tryptase-7, or an expression  
CC product; a nucleic acid encoding a serine protease (SP); and a  
CC method of producing a mature SP. Tryptase-7 polypeptides can be  
CC used for treating disorders mediated by undesirable thrombus clot  
CC formation such as myocardial infarction and reocclusion following  
CC angioplasty of blood clots associated with pulmonary  
CC thromboembolism, deep vein thrombosis, cerebral embolism, renal  
CC vein and peripheral arterial thrombosis.

PT Tryptase-6 complex inhibitory peptides - used to treat mast  
PT cell-mediated inflammatory disorders e.g. asthma  
XX  
PS Disclosure; Page 44; 69pp; English.  
XX  
CC This represents the mouse mast cell protease (mMCP-6) zymogen. The  
CC invention provides sequences shown in AAW63160 to AAW63169 that are  
CC inhibitors of mMCP-6. These peptides which are tryptase-6 complex  
CC inhibitors, can be used for treating a mast cell-mediated inflammatory  
CC disorder. The inhibitors can be used to treat inflammatory disorders  
CC including asthma, allergic rhinitis, urticaria and antioedema,  
CC eczematous dermatitis (atopic dermatitis), anaphylaxis,  
CC hyperproliferative skin disease, peptic ulcers, inflammatory bowel

CC disorder, hyperresponsiveness and inflammatory skin conditions.

PT Human mast cell protease 6-like enzyme polypeptide and polynucleotide  
for identifying modulators useful in treating diseases e.g. asthma,  
PT atherosclerosis, neurodegenerative disease and pathogenic infection -  
XX  
PS Disclosure; Fig 3; 88pp; English.

CC The present invention describes a human mast cell protease 6-like enzyme  
CC (I). (I) has antiasthmatic, antiarteriosclerotic, neuroprotective,  
CC vasoconstrictive, osteoplastic, antitumour, cytostatic and antiinflammatory  
CC activities. (I) is useful for the detection of a polynucleotide (II)  
CC which encodes (I), in a biological sample. (I) and (II) can be used for  
CC screening agents which decrease the activity of (I) or (II). (I), (II)  
CC and a reagent that modulates the activity of (I) or (II) can be used for  
CC treating a mast cell protease 6-like enzyme dysfunction related disease  
CC selected from metastasis of malignant cells, tumour angiogenesis,  
CC inflammation including asthma, atherosclerosis, neurodegenerative disease  
CC and pathogenic infection, where the neurodegenerative diseases include  
CC prion protein amyloid plaques of Genstmann-Strausler syndrome,  
CC Creutzfeldt-Jakob disease, and Scrapie, and other diseases such as  
CC reestenosis, and osteoporosis. The present sequence represents mouse mast  
CC cell protease 6 precursor (MMP-6), which is given in the exemplification  
CC of the present invention.

PT New diagnosis of leukaemia - by detecting genes for tumour antigen  
rejection precursors or corresponding proteins

PS Claim 11; Pages 58-59; 88pp; English.

CC The present sequence represents the amino acid sequence of the  
CC trypsin-L gene clone NVB352/1. The protein is a tumour rejection  
CC antigen precursor (TRAP). The specification describes the treatment of  
CC disorders which characterised by expression of a leukaemia-associated  
CC nucleic acid such as TRH. The products are used for in vivo or in vitro  
CC screening for leukaemia, lymphoma or other cancers by usual  
CC hybridisation/amplification or immunoassay methods. TRAPs, when  
CC processed to antigens or complexed with HLA (human lymphocyte antigen)  
CC molecules, or nucleic acid encoding them, are useful in vaccines for  
CC treating leukaemia.

 XX  
 PS Disclosure; Page 61; 92pp; English.  
 XX  
 CC This is the amino acid sequence of the gerbil homologue of mouse  
 CC mast cell protease 7 (mMCP-7, see also AAW64233), deduced from a  
 CC nucleic acid sequence (see AAW44326). Mature gerbil homologue of  
 CC mMCP-7 can be used to prevent or inhibit fibrin clot formation in  
 CC vitro or in vivo. The invention provides: compositions comprising  
 CC an isolated trypsin-7 such as mMCP-7, its homologues or humanised  
 CC mMCP-7; a method for treating a blood clot by administering a  
 CC nucleic acid molecule that codes for a trypsin-7, or an expression  
 CC product, to decrease fibrinogen activity; a nucleic acid encoding a  
 CC serine protease (SP); and a method of producing a mature SP by  
 CC expressing the inactive zymogen in a host cell, and cleaving the  
 CC enterokinase susceptibility domain. The trypsin-7 polypeptides  
 CC can be used to treat disorders mediated by undesirable thrombus  
 CC clot formation such as myocardial infarction and reocclusion  
 CC following angioplasty of blood clots associated with pulmonary  
 CC thromboembolism, deep vein thrombosis, cerebral embolism, renal  
 CC vein and peripheral arterial thrombosis. They are also useful for  
 CC all surgical procedures that require decreased blood clots.

PS
XX This is the deduced amino acid sequence of human mast cell tryptase
CC alpha (see also AAV44328). The invention provides: compositions
CC comprising an isolated tryptase-7 that may include chimeric proteins
CC that contain (a) a human tryptase-7 for all but the active site region
CC and (b) the substrate-binding pocket of mouse tryptase-7 or its
CC homologues (see AAW64233-39); a method for treating a blood clot by
CC administering a nucleic acid molecule that codes for a tryptase-7,
CC or an expression product, to decrease fibrinogen activity; a nucleic
CC acid encoding a serine protease (SP); and a method of producing a
CC mature SP by expressing the inactive zymogen in a host cell, and
CC cleaving the enterokinase susceptibility domain. The tryptase-7
CC polypeptides can be used to treat disorders mediated by undesirable
CC thrombus clot formation such as myocardial infarction and
CC reocclusion following angioplasty of blood clots associated with
CC pulmonary thromboembolism, deep vein thrombosis, cerebral embolism,
CC renal vein and peripheral arterial thrombosis. They are also
CC useful for all surgical procedures that require decreased blood
CC clots.

PS
XX This represents the human mast cell tryptase alpha protein which is a
CC homologue of the mouse mast cell protease (mMCP-6) zymogen. The
CC invention provides sequences shown in AAW63160 to AAW63169 that are
CC inhibitors of mMCP-6. These peptides which are tryptase-6 complex
CC inhibitors, can be used for treating a mast cell-mediated inflammatory
CC disorder. The inhibitors can be used to treat inflammatory disorders
CC including asthma, allergic rhinitis, urticaria and anioedema,
CC eczematous dermatitis (atopic dermatitis), anaphylaxis,
CC hyperproliferative skin disease, peptic ulcers, inflammatory bowel
CC disorder, hyperresponsiveness and inflammatory skin conditions.

XX

PS Claim 8; Page 111-112; 126pp; English.

The present invention relates to recombinant human proteolytic triptases, active site mutants of these triptases and the methods for producing these. The method involves the production of a DNA expression construct comprising a promoter operably linked to a secretion signal sequence which is operably linked to a DNA sequence encoding a proteolytic triptase with an active site mutation (the construct drives expression of a mature proteolytic triptase that lacks enzymatic activity due to the active site mutation, in hosts transformed to contain the construct). The method is useful for producing enzymatically-active beta-II triptase. The active site mutants of proteolytic triptase provide a tool to investigate the structural and functional properties of the proenzyme and its enzymatic activity, and for modelling studies. The enzymatically-active, recombinant proteolytic triptase antibodies are useful as an antigen to generate anti-human triptase antbodies and in drug screening for compounds which act as triptase inhibitors, antagonists, agonists, etc. AAU1209-AAU1204 represent recombinant human beta-II triptase active site mutants.

DNA construct for producing enzymatically-inactive proteolytic  
tryptase, comprises DNA sequence encoding proteolytic tryptase having  
an active site mutation -  
Claim 8; Page 114-115; 126BP; English.

The present invention relates to recombinant human proteolytic  
tryptases, active site mutants of these tryptases and the methods for  
producing these. The method involves the production of a DNA expression  
construct comprising a promoter operably linked to a secretion signal  
sequence which is operably linked to a DNA sequence encoding a  
proteolytic tryptase with an active site mutation (the construct drives  
expression of a mature proteolytic tryptase that lacks enzymatic activity  
due to the active site mutation, in hosts transformed to contain the  
construct). The method is useful for producing enzymatically-active  
beta-II tryptase. The active site mutants of proteolytic tryptase provide  
a tool to investigate the structural and functional properties of the  
protease and its enzymatic activity, and for modelling studies. The  
enzymatically-active, recombinant proteolytic tryptase produced are  
useful as an antigen to generate anti-human tryptase antibodies  
and in drug screening for compounds which act as tryptase inhibitors,  
antagonists, agonists, etc. AAU12009-AAU12024 represent recombinant  
human beta-II tryptase active site mutants.

Disclosure; Page 65; 92pp; English.

This is the deduced amino acid sequence of human mast cell tryptase  
I (see also AAV44329). The invention provides: compositions  
comprising an isolated tryptase-7 that may include chimeric proteins  
that contain (a) a human tryptase for all but the active site region  
and (b) the substrate-binding pocket of mouse tryptase-7 or its  
homologues (see AAW64233-39); a method for treating a blood clot by  
administering a nucleic acid molecule that codes for a tryptase-7,  
or an expression product, to decrease fibrinogen activity; a nucleic  
acid encoding a serine protease (SP); and a method of producing a  
mature SP by expressing the inactive zymogen in a host cell, and  
cleaving the enterokinase susceptibility domain. The tryptase-7  
polypeptides can be used to treat disorders mediated by undesirable  
thrombus clot formation such as myocardial infarction and  
reocclusion following angioplasty of blood clots associated with  
pulmonary thromboembolism, deep vein thrombosis, cerebral embolism,  
renal vein and peripheral arterial thrombosis. They are also  
useful for all surgical procedures that require decreased blood  
clots.

 XX Examining the ischemic condition (e.g. occlusive ischemia) by measuring  
 PT expression levels of particular genes defined in the specification or  
 PT by determining the expression profile of a gene group comprising these  
 PT genes -  
 Claim 2; Page 1721-1722; 2690pp; English.

The present invention describes a method for examining ischaemic  
 conditions, comprising measuring the expression levels of particular  
 genes (I) in a test sample or determining the expression profile of a  
 gene group in the sample comprising genes selected from (I). The method  
 is useful for examining the ischaemic condition (e.g. compressive  
 ischaemia, occlusive ischaemia or vasoospastic ischaemia) by measuring  
 CC expression levels of particular genes (ABI99902 to ABI99912, encoding  
 CC the protein sequences of particular genes (ABI99902 to ABI99912) or by determining the  
 CC expression profile of a gene group comprising these genes. The  
 CC expression levels or expression profiles produced by these genes are  
 CC used as an indicator when screening for ischaemic condition-improving  
 CC drugs or therapeutics for ischaemic diseases. ABI99913 and ABI99914  
 CC represent PCR primers for a mouse ischaemic condition related sequence,  
 CC which are used in the exemplification of the present invention.

 PT pharmaceutical compositions, e.g. vaccines, for treating pancreatic  
 PT cancer -  
 XX PS Claim 2; Page 162-163; 167pp; English.

XX CC The present invention relates to the isolation of cDNA sequences  
 CC (ABK44061-ABK44209) encoding human pancreatic tumour proteins. The  
 CC polynucleotide sequences encoding human pancreatic tumour proteins are  
 CC useful for stimulating an immune response in a patient and treating  
 CC pancreatic cancer in a patient. A host cell that expresses these  
 CC polynucleotides is useful for determining the presence of cancer in a  
 CC patient. A composition comprising the polynucleotide, its encoded  
 CC protein, or an antibody that binds to the protein may be used in the  
 CC diagnosis, prevention and/or treatment of diseases, particularly  
 CC pancreatic cancer. The sequences of the invention are also useful in  
 CC pharmaceutical compositions, e.g. vaccines, for the diagnosis and  
 CC treatment of pancreatic cancer. Such compositions may be useful for  
 CC inhibiting the development of cancer in a patient, or as markers for  
 CC the progression of cancer. The polynucleotide sequences may also be used  
 CC as probes or primers for nucleic acid hybridisation assays.

 PT cancer, or for use in assays for diagnosing a pathological condition -  
 XX PS Claim 11; Page 1131-1132; 1379pp; English.

XX AAC98773 to AAC99231 encode the human pancreatic cancer associated  
 CC proteins, called pancreatic cancer antigens, given in AAB54008 to  
 CC AAB54466. The human pancreatic cancer antigens have cytostatic,  
 CC neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive,  
 CC gynaeological, cardiant and antiinflammatory activities, and can be used  
 CC in gene therapy. The polynucleotide and proteins can be used for  
 CC preventing, treating, or ameliorating a medical condition or in assays  
 CC for diagnosing a pathological condition or a susceptibility to one in a  
 CC subject. Binding partners to the proteins and the activity of the  
 CC proteins can be identified. The pancreatic cancer antigens can be used to  
 CC detect, treat or prevent pancreatic disorders, especially cancer.  
 CC Agonists and antagonists to the antigens can be screened for.  
 CC pancreatic cancer antigen polynucleotides can be used to design nucleic  
 CC acid hybridization probes that can be used in chromosome mapping, linkage  
 CC analysis, tissue identification and/or typing and a variety of forensic  
 CC and diagnostic methods. The proteins can be used to generate antibodies  
 CC which are used to purify, detect and target the polypeptides, including  
 CC both in vivo and in vitro diagnostic and therapeutic methods. The  
 CC proteins can be used to treat or prevent neural, immune system, muscular,  
 CC reproductive, gastrointestinal, pulmonary, cardiovascular, renal or  
 CC proliferative disorders. AAC99232 to AAC99240 and AAB54467 represent  
 CC sequences used in the exemplification of the present invention.

 PS  
 XX Disclosure; Fig 20; 265pp; German.

CC This invention describes novel bifunctional human tryptase (HTR)  
 CC inhibitors (I) of formula K1-L-K2 and their N-oxides (if a heteroaryl,  
 CC heteroarylene, heterocycloalkyl or heterocycloalkylene group is present)  
 CC and salts where K1, K2 = head groups, each including a group Q which  
 CC can interact with carboxylate, b = linker of formula -A5-B5-A3-B3-A1-B1-  
 CC M-B2-A2-A4-B6-A6-, which can adopt a conformation such that the K  
 CC groups are 20-45 Angstrom apart and permits (I) to penetrate into a  
 CC volume of 52 x 32 x 40 Angstrom. A1, A2 = CO, NH, O, S, SO2, SO2NH,  
 CC NH-SO2, CONH, NHCO, OCO, COO or direct bond, A3, A4 = CO, CS, S, S, NH,  
 CC OCO, COO, CONH, NHCO, direct bond or -W-Ra-, W = CO or bond, Ra =  
 CC cyclohexylene, phenylene, oxazolidine-2,3-, 3,4- or 3,5-diy1,  
 CC pyrrolidine-1,2- or 1,3-diy1, piperazine-1,4-diy1, morpholine-2,4- or  
 CC 3,4-diy1, thiamorpholine-2,4- or 3,4-diy1 or piperidine-1,2-, 1,3- or  
 CC 1,4-diy1, A5, A6 = CO, NH, O, S, CONH, NHCO, OCO, COO or direct bond,  
 CC W = -Ar-, -Ar-CR1R2-Ar-, -Ar-Ar-, -Ar-G-Ar-, - (cyclohexylene)-E-  
 CC (cyclohexylene) - (where each ring is optionally substituted by 1-3 A');  
 CC 2,5-dioxopiperazine-3,6-diy1; pyridinediy1 substituted by R5-R7;  
 CC -(CH2)2CONHCH(COR8)(CH2)4-; 5-8c cycloalkylene (optionally substituted  
 CC by 1-3 A'); or a tricyclic group of formula (I)-(IV) (where each benzo  
 CC ring of (I) and (II) is optionally substituted by 1-3 A'), Ar =  
 CC phenylene (optionally substituted by 1-3 A'), R1, R2 = H, A' (optionally  
 CC partially or completely substituted by F) or OH, or CR1R2 = S- or  
 CC 6-membered, optionally substituted cyclic hydrocarbonyl; E, T = CH2, O or  
 CC bond; G = O, S or SO2; R5, R6 = H or A'; R7 = H, A', Ph or pyridyl; R8 =  
 CC OH, NH2, NHA', N(A')2, piperidino or morpholino; K1 = -B7(CO)m-B9-X1,  
 CC -B7(CO)m-B9-Y1 or -B7-(CO)m-B9-B11-X1; K2 = -B8(CO)p-B10-X2,  
 CC -B8(CO)p-B10-Y2 or -B8(CO)p-B10-B12-X2; B1-B6 = bond or 1-4c alkylene;  
 CC B7-B12 = bond or 1-3c alkylene; m, p = 0 or 1; X1, X2 = NH2, SA',  
 CC -C(NH)-NHRD, guanidino, -O-N=C(NH2)2, -S-C(NH)-NH2, -C(NH)-SA',  
 CC -NH-C(NH)-C(NH)-NH2 or -C(NH)-NH2; Rb = H, OH or A';  
 CC A' = 1-4c alkyl; Y1, Y2 = 4-11c heteroaryl or 2-7c heterocycloalkyl,  
 CC containing at least one ring N which can function as proton acceptor  
 CC or donor; Z1, Z2 = 5-12c arylene, 5-12c heteroarylene, 3-8c cycloalkylene  
 CC or 3-8c heterocycloalkylene; arylene, heteroarylene, cycloalkylene,  
 CC 1-heterocycloalkylene, heteroaryl or heterocycloalkyl moieties are  
 CC optionally substituted by 1-3 of OH, halo, NO2, CN, NH2, A', OA', COOA',  
 CC OCOA', COOH or CONH2. The products of the invention have antiallergic,  
 CC antiinflammatory, antiasthmatic and antiarthritic activity. HTR is an  
 CC inflammatory mediator released from mast cells. (I) are used for the  
 CC treatment and diagnosis of allergic and/or inflammatory disorders  
 CC associated with tryptase release, e.g. allergic bronchitis,  
 CC conjunctivitis or rhinitis, bronchial asthma, autoimmune diseases such  
 CC as arthritis, multiple sclerosis, dermatitis and psoriasis and  
 CC inflammatory bowel disease. This sequence represents a human lung mast  
 CC cell beta-tryptase which is used to describe the method of the invention.

PT New DNA expression construct for production of enzymatically active  
PT recombinant human beta-tryptase -  
PS Disclosure; Page 43-44; 50pp; English.

XX This sequence is the human beta-tryptase. The invention relates to a  
CC DNA expression construct comprising (5' to 3') a promoter linked to a  
CC signal sequence which is linked to a sequence encoding human  
CC beta-tryptase. The DNA construct is useful for transforming host cells to  
CC express, post translationally process and secrete enzymatically active  
CC human tryptase. The method is useful for the production of large amounts  
CC of tryptase with defined specifications. The transformant is useful for  
CC pharmacological studies, combinatorial library screens and X ray  
CC crystallographic studies. The tryptase produced allows for the  
CC development of tryptase agonists and/or antagonists, is useful as an  
CC antigen to generate antihuman tryptase antibodies in various animals,  
CC can be used in screening for compounds which act as tryptase inhibitors,  
CC antagonists, agonists etc. and to assay for the presence of tryptase in  
CC biological or other solutions. Tryptase inhibitors, antagonists, agonists  
CC etc. may be useful as therapeutics. The tryptase does not require any  
CC post-expression or post-purification modifications or manipulations to  
CC initiate tryptase activity and it has enzymatic activity which compares  
CC favourably with cadaveric tryptase. The availability of enzymatically  
CC active tryptase facilitates the large scale screening of combinatorial  
CC libraries for specific tryptase inhibitors as potential therapeutics and  
CC advances the understanding of the biological significance of tryptase in  
CC mast cell mediated diseases. The tryptase can be used to detect low  
CC levels of tryptase.

PT DNA construct for producing enzymatically-inactive proteolytic  
PT tryptase, comprises DNA sequence encoding proteolytic tryptase having  
PT an active site mutation -  
XX  
PS Claim 8; Page 90-91; 126pp; English.

CC The present invention relates to recombinant human proteolytic  
CC tryptases, active site mutants of these tryptases and the methods for  
CC producing these. The method involves the production of a DNA expression  
CC construct comprising a promoter operably linked to a secretion signal  
CC sequence which is operably linked to a DNA sequence encoding a  
CC proteolytic tryptase with an active site mutation (the construct drives  
CC expression of a mature proteolytic tryptase that lacks enzymatic activity  
CC due to the active site mutation, in hosts transformed to contain the  
CC construct). The method is useful for producing enzymatically-active  
CC beta-II tryptase. The active site mutants of proteolytic tryptase provide  
CC a tool to investigate the structural and functional properties of the  
CC protease and its enzymatic activity, and for modelling studies. The  
CC enzymatically-active, recombinant proteolytic tryptase produced are  
CC useful as an antigen to generate anti-human tryptase antibodies,  
CC and in drug screening for compounds which act as tryptase inhibitors,  
CC antagonists, agonists, etc. AAU12009-AAU12024 represent recombinant  
CC human beta-II tryptase active site mutants.

CC and in drug screening for compounds which act as tryptase inhibitors,

PT Diagnosing breast cancer comprises determining expression of nucleic
PT acid molecules or expression products that are differentially expressed
PT in normal and malignant tissue -
XX
PS Claim 37; Page 217-218; 219pp; English.
XX
XX The present invention relates to a method for diagnosing breast cancer
CC in a subject suspected of having endometrial cancer. The method
CC comprises determining the expression of a set of human genes or
CC expression products in an endometrial sample suspected of being
CC cancerous. The human genes of the invention are differentially
CC expressed in breast tumours characterised as high or low MLI (mitotic
CC activity index). These sets of genes can be used to discriminate between
CC high and low MLI breast tumours. The invention also provides DNA and
CC protein microarrays for analysing the expression of the human genes and
CC their protein products. The methods and arrays are useful for the
CC diagnosis and prognosis of endometrial cancer, selecting and monitoring
CC treatment regimes, and identification of compounds useful for the
CC treatment of endometrial cancer. AAU84311-AAU84361 represent the human
CC proteins of the invention that are differentially expressed in breast
CC cancer tissue.

XX New vaccine for treatment of Schistosoma infections contains a  
XX recombinant fusion protein comprising cercarial elastase sequence fused  
XX to bacterial, phage or viral protein -  
XX  
XX Claim 3; Page 17; 26pp; English.

CC The invention provides a vaccine comprising a recombinant fusion protein  
CC capable of eliciting immunity against Schistosoma parasites. The fusion  
CC protein comprises the 27 or 28 kDa cercarial elastase sequence of  
CC S. mansoni or an active fragment, homologue or variant, fused to a  
CC bacterial, phage or viral protein. The vaccine containing the fusion  
CC protein has been found to induce a significantly increased antibody  
CC response against schistosoma infections, compared to the use of S.  
CC mansoni cercarial elastase in its native form. The present sequence  
CC represents the S. mansoni cercarial elastase protein fragment encoded by  
CC exon 2 of the cercarial elastase gene, used in the fusion protein of the  
CC invention.

XX Identifying signal oligopeptide(s) in protein sequence(s) - shown as  
PT regions of max. hydrophilicity, used in modulating communication  
between protein(s)  
XX  
XX Claim 5; Page 69; 88pp; English.

The sequences given in AAM21201-560 represent hydrophilic signal oligo-peptides. These signal oligopeptides are localised on the surface of the protein and are represented by the hydrophilicity maxima of the protein. These peptides are enriched in charged amino acids arranged with neutral spacer amino acids. The specific signal character of these oligopeptides is determined by a characteristic combination of conformation and charge within the signal sequence. CC These oligopeptides may be used as vaccines in the treatment of human disease, as competitive inhibitors to prevent or reduce the metabolic action or interaction of a selected protein by blocking its specific signal sequences, or as therapeutic agents to function as feedback regulators to reduce synthesis rate of a selected protein. CC These peptides may be modified by omitting one or more amino acids at the N- and/or C-terminal, by substituting one or more amino acids without consideration of charge and polarity, by substituting one or more amino acids with amino acid residues with similar charge and/or polarity, by omitting one or more amino acids or a combination of these.

(GEST ) GENSET.	
Dumas Milne Edwards J, Duclert A, Giordano J;	
WP1: 2000-038446/03.	
N-PDB: AA242384.	
Novel secreted protein 5' expressed sequence tag sequences used in diagnostic, forensic, gene therapy, and chromosome mapping procedures	
Claim 3; Page 637; 837pp; English.	
AA242265 to AA243075 represent novel 5' expressed sequence tag (EST) sequences, corresponding to human secreted proteins. AA242265 to AA243075 represent the EST-related proteins corresponding to AA242265 to AA243075. The 5' ESTs can be used for producing secreted human gene products. They can be used to identify and isolate 5' untranslated regions (UTRs), and upstream regulatory regions which control the location, development stage, rate, and quantity of protein synthesis, as well as stability of mRNA. The ESTs are also useful as probes for chromosome mapping, and to obtain full length cDNA clones. The ESTs can also be used in forensic procedures to identify individuals, or in diagnostic procedures to identify individuals having genetic diseases resulting from abnormal gene expression. The products may also be used in gene therapy protocols. The nucleic acids encoding signal peptides can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell. The proteins encoded by the EST sequences may be useful in treating a variety of human conditions. Secreted proteins have therapeutic value, and the identification of new secreted proteins is valuable. AA242249 to AA242264 and AA244644 to AA244650 represent sequences used in the exemplification of the present invention.

 XX  
 CC The present invention describes substantially purified human proteins  
 CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1  
 CC in the specification). ABN15762 to ABN27252 encode the human ORFX  
 CC proteins given in ABP00010 to ABP11500. ORFX proteins are useful for  
 CC treating or preventing a pathology associated with an ORFX-associated  
 CC disorder in humans, and in the manufacture of a medicament for treating a  
 CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide  
 CC sequences can be used in gene therapy. ORFX sequences can be used in the  
 CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver,  
 CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,  
 CC osteoarthritis, neurodegenerative disorders, disorders related to organ  
 CC transplantation, cardiovascular diseases, diabetes mellitus, systemic  
 CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester  
 CC storage disease, various immune deficiencies and disorders, infectious  
 CC diseases, autoimmune disorders such as multiple sclerosis, rheumatoid  
 CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host  
 CC disease and autoimmune inflammatory eye disease. ORFX proteins are also  
 CC useful for treating burns, incisions, ulcers, for treating osteoporosis,  
 CC bone degenerative disorders, or periodontal disease, and for gut  
 CC protection or regeneration and treatment of lung or liver fibrosis,  
 CC reperfusion injury in various tissues and conditions resulting from  
 CC systemic cytokine damage.  
 CC N.B. The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO

 PT New isolated polynucleotide and encoded polypeptides, useful in  
 PT diagnostics, forensics, gene mapping, identification of mutations  
 PT responsible for genetic disorders or other traits and to assess  
 PT biodiversity -  
 PS  
 PS Claim 20: SEQ ID NO 55356; 103pp: English.  
 XX  
 CC The invention relates to isolated polynucleotide (I) and  
 CC polypeptide (II) sequences. (I) is useful as hybridisation probes,  
 CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome  
 CC and gene mapping, and in recombinant production of (II). The  
 CC polynucleotides are also used in diagnostics as expressed sequence tags  
 CC for identifying expressed genes. (I) is useful in gene therapy techniques  
 CC to restore normal activity of (II) or to treat disease states involving  
 CC (II). (II) is useful for generating antibodies against it, detecting or  
 CC quantitating a polypeptide in tissue, as molecular weight markers and as  
 CC a food supplement. (II) and its binding partners are useful in medical  
 CC imaging of sites expressing (II). (I) and (II) are useful for treating  
 CC disorders involving aberrant protein expression or biological activity.  
 CC The polypeptide and polynucleotide sequences have applications in  
 CC diagnostics, forensics, gene mapping, identification of mutations  
 CC responsible for genetic disorders or other traits to assess biodiversity  
 CC and to produce other types of data and products dependent on DNA and  
 CC amino acid sequences. ABG00010-ABG30377 represent novel human  
 CC diagnostic amino acid sequences of the invention.  
 CC Note: The sequence data for this patent did not appear in the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences.

 PT Isolated nucleic acids and polypeptides, useful for preventing  
 PT diagnosing and treating e.g. leukaemia, inflammation and immune  
 PT disorders -  
 PS  
 PS Claim 20: SEQ ID NO 19292; 1399pp + Sequence Listing: English.  
 XX  
 CC The invention relates to human polynucleotides (AAI79941-AAI93841) and  
 CC the encoded proteins (AA000010-AA013910) that exhibit activity relating to  
 CC cytokine, cell proliferation or cell differentiation or which may induce  
 CC production of other cytokines in other cell populations. The  
 CC polynucleotides and polypeptides are useful in gene therapy, vaccines or  
 CC peptide therapy. The polypeptides have various cytokine-like activities,  
 CC e.g. stem cell growth factor activity, haematopoiesis regulating  
 CC activity, tissue growth factor activity, immunomodulatory activity and  
 CC activin/inhibin activity and may be useful in the diagnosis and/or  
 CC treatment of cancer, leukaemia, nervous system disorders, arthritis and  
 CC inflammation.  
 CC Note: The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences.

XX  
PS Claim 11; Page 390; 453pp; English.  
XX  
XX This invention describes a novel isolated polypeptide (I) and its  
CC encoding nucleic acid molecule (II) which have immunosuppressive,  
CC antiarthritic, antirheumatic, antiproliferative, cytostatic, cardiant,  
CC vasotropic, cerebroprotective, neurotropic, neuroprotective, antibacterial,  
CC virucide, fungicide and ophthalmological activity and which can be used  
CC for gene therapy. (I) and (II) are used to prevent, treat or ameliorate  
CC a medical condition in e.g. humans, mice, rabbits, goats, horses, cats,  
CC dogs, chickens or sheep. (I) and (II) are also used in diagnosing a  
CC pathological condition or susceptibility to a pathological condition. The  
CC antibodies to (II) can also be used in alleviating symptoms associated  
CC with the disorders and in diagnostic immunoassays e.g. radioimmunoassays  
CC or enzyme linked immunosorbent assays (ELISA). Disorders which are  
CC diagnosed or treated include autoimmune diseases e.g. rheumatoid  
CC arthritis, hyperproliferative disorders e.g. neoplasms of the breast or  
CC liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular  
CC disorders e.g. cerebral ischemia, angiogenesis, nervous system disorders  
CC e.g. Alzheimer's disease, infections caused by bacteria, viruses and  
CC fungi and ocular disorders e.g. corneal infection. The polypeptides can  
CC also be used to aid wound healing and epithelial cell proliferation, to  
CC prevent skin aging due to sunburn, to maintain organs before  
CC transplantation, for supporting cell culture of primary tissues, to  
CC regenerate tissues and in chemotaxis. The polypeptides are used to  
CC modulate mammalian metabolism, to change mammal's mental state or  
CC physical state by influencing biorhythms circadian rhythms, depression  
CC tendency for violence tolerance for pain, reproductive capabilities,  
CC hormonal or endocrine levels, appetite, libido, memory, stress or other  
CC cognitive qualities, as a food additive or preservative, such as to  
CC increase or decrease storage capabilities, fat content, lipid, protein,  
CC carbohydrates, vitamins, minerals, cofactors or other nutritional  
XX components.

PT preventing and treating cardiovascular disease, neurodegenerative,  
PT hyperproliferative disorders and disorders related to organ  
PT transplantation -  
XX  
XX  
PS Claim 10; Page 878; 2508pp; English.  
XX  
XX Sequences ABP31028-ABP35561 represent 4534 novel human proteins  
CC designated ORF (open reading frame) 1-4534, and sequences ABN75054-  
CC ABN79587 represent cDNAs encoding them. The invention also encompasses  
CC polypeptides at least 80% identical to the ORF1-ORF4534 (collectively  
CC referred to as ORFX) proteins, polynucleotides at least 85% identical to  
CC the ORFX nucleic acid sequences, vectors and host cells comprising ORFX  
CC polynucleotides, the recombinant production of ORFX proteins, antibodies  
CC specific for ORFX proteins, methods of detecting ORFX polynucleotides and  
CC polypeptides, methods of screening for modulators of ORFX expression or

CC activity, and methods of screening individuals for a predisposition to an  
 CC ORFX-associated disorder. The ORFX proteins of the invention have a wide  
 CC range of biological activities, such as cytokine, cell proliferation,  
 CC cell differentiation, immune modulation, haematopoiesis regulation,  
 CC tissue growth, angiogenesis, activin or inhibin activity, chemocytic/  
 CC chemokine activity, haemostatic activity, thrombolytic activity,  
 CC receptor/ligand, antiinflammatory activity, tumour inhibition activity,  
 CC and antifibrotic activity, and may also be involved in the determination  
 CC of bodily characteristics, fertility and behaviour. ORFX proteins,  
 CC nucleic acids and antibodies may be used in the treatment of cancers,  
 CC other proliferative disorders such as psoriasis and benign tumours,  
 CC neurological disorders such as epilepsy and Alzheimer's disease,  
 CC cardiovascular diseases, immune system disorders, disorders related to  
 CC organ transplantation, disorders of tissue growth and regeneration,  
 CC diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester  
 CC storage disease, and infectious diseases caused by viral, bacterial,  
 CC fungal and other pathogens. ORFX nucleic acids may also be used as a  
 CC source of primers and probes, in the detection of ORFX genomic sequences  
 CC or transcripts, in the identification and cloning of homologous  
 CC sequences, in genetic diagnosis, and in forensic biology. The ORFX  
 CC nucleic acids may additionally be used to produce transgenic animals  
 CC which may be useful for studying the function and/or activity of ORFX  
 CC protein, and in drug screening. The ORFX proteins may also be used as  
 CC immunogens to generate specific antibodies, which are useful in the  
 CC diagnosis, treatment and monitoring of ORFX-associated diseases.

PT New nucleic acid encoding one of 21 human secreted proteins for  
 PT diagnosing, preventing, treating or ameliorating medical conditions,  
 PT such as autoimmune disease and cancer, and used as a food additive or  
 PT preservative -

PS Claim 11: Page 446; 490pp; English.

CC AAD05220-AAD05282 represent cDNAs corresponding to 21 human secreted  
 CC protein genes, and AAE01352-AAE01413 represent the proteins they encode.  
 CC AAE01415-AAE01433 represent human secreted protein fragments or variants.  
 CC The secreted proteins and their genes are useful for preventing, treating  
 CC or ameliorating medical conditions, e.g., by protein or gene therapy.  
 CC Pathological conditions can be diagnosed by determining the amount of the  
 CC new protein in a sample or by determining the presence of mutations in  
 CC the new genes. Specific uses are described for each of the 21 genes,  
 CC based on the tissues in which they are most highly expressed, and include  
 CC developing products for the diagnosis or treatment of proliferative  
 CC disorders, cancer, tumours, foetal and developmental abnormalities,  
 CC haematopoietic disorders, diseases of the immune system, AIDS, autoimmune  
 CC diseases (e.g., rheumatoid arthritis), inflammation, allergies,  
 CC neurological disorders (e.g., Alzheimer's disease, Parkinson's disease),  
 CC cognitive disorders, schizophrenia, asthma, skin disorders (e.g.,  
 CC psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders,  
 CC angiogenic disorders, kidney disorders, gastrointestinal disorders,  
 CC pregnancy-related disorders, endocrine disorders, and infections. The  
 CC proteins can also be used to aid wound healing and epithelial cell  
 CC proliferation, to prevent skin aging due to sunburn, to maintain organs  
 CC before transplantation, for supporting cell culture of primary tissues,  
 CC to regenerate tissues, to identify their cognate ligands or binding  
 CC partners, and in chemotaxis, and can be used as a food additive or  
 CC preservative to modify storage properties. Antibodies specific for a  
 CC protein of the invention can be used in alleviating symptoms associated  
 CC with the disorders mentioned above, and in diagnostic immunoassays e.g.,  
 CC radioimmunoassay or enzyme linked immunosorbent assay (ELISA).  
 CC The present sequence represents a human secreted protein of  
 CC the invention.

XX  
XX The invention relates to human polynucleotides (AAI79941-AAI93841) and  
CC the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to  
CC cytokine, cell proliferation or cell differentiation or which may induce  
CC production of other cytokines in other cell populations. The  
CC polynucleotides and polypeptides are useful in gene therapy, vaccines or  
CC peptide therapy. The polypeptides have various cytokine-like activities,  
CC e.g. stem cell growth factor activity, haematopoiesis regulating  
CC activity, tissue growth factor activity, immunomodulatory activity and  
CC activin/inhibin activity and may be useful in the diagnosis and/or  
CC treatment of cancer, leukaemia, nervous system disorders, arthritis and  
CC inflammation.  
CC Note: The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pcl\_sequences.

PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,  
PT useful for preventing, diagnosing and/or treating cancers and  
PT metastasis -  
XX  
PS Claim 11: SEQ ID NO 11823: 3071pp + Sequence Listing; English.  
XX  
XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)  
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic  
CC activity, and can be used in gene therapy and vaccine production. (I)  
CC proteins and polynucleotides may be used in the prevention, diagnosis and  
CC treatment of diseases associated with inappropriate (I) expression. For  
CC example, they may be used to treat disorders associated with decreased  
CC expression by rectifying mutations or deletions in a patient's genome  
CC that affect the activity of (I) by expressing inactive proteins or to  
CC supplement the patients own production of (I). Additionally, (I)  
CC polynucleotides may be used to produce the secreted (I), by inserting  
CC the nucleic acids into a host cell and culturing the cell to express the  
CC protein. (I) proteins and polynucleotides may be used to prevent,  
CC diagnose and treat immune/hematopoietic-related diseases, especially  
CC cancers and cancer metastases of hematopoietic-derived cells. AAK64703  
CC to AAK87694 represent human immune/hematopoietic antigen genomic  
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169  
CC represent sequences used in the exemplification of the present invention.

PS  
XX  
XX AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,  
CC which represent the human ORFX open reading frames 1 to 3161. The ORFX  
CC sequences have activities such as: cytostatic; hepatotropic; vulnery;  
CC antiprosclatic; antiparkinsonian; nootropic; neuroprotective;  
CC osteopathic; anticonvulsant; antiarthritic; immunosuppressant;  
CC immunostimulant; cardiant; thrombolytic; coagulant; vasotropic;  
CC antidiabetic; hypotensive; dermatological; immunosuppressive;  
CC antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic;  
CC antithyroid; and antianemic. The sequences can be used for determining  
CC the presence of or predisposition to, or preventing or treating  
CC pathological conditions associated with an ORFX-associated disorder. The  
CC nucleic acids can be used to express ORFX proteins in gene therapy  
CC vectors. The proteins and nucleic acids may be used to treat cancers,  
CC proliferative disorders, neurodegenerative disorders, osteoarthritis,  
CC graft vs host disease, cardiovascular disease, diabetes mellitus,  
CC hypertension, hypothyroidism, cholesterol ester storage, systemic lupus  
CC erythematosus, severe combined immunodeficiency (SCID), AIDS, viral,  
CC bacterial or fungal infection, malaria, autoimmune disorders, asthma,  
CC allergies, aplastic anaemia, burns, wounds, bone and cartilage damage,  
CC nocturnal haemoglobinuria, antiinflammatory disease; to enhance  
CC coagulation; to inhibit thrombosis; and as a contraceptive.

 PT Novel human polypeptides and polynucleotides useful for diagnosing,  
 PT preventing and treating cardiovascular disease, neurodegenerative,  
 PT hyperproliferative disorders and disorders related to organ  
 PT transplantation -  
 PT  
 PS Claim 10; Page 1269; 2508pp; English.  
 PS  
 XX Sequences ABP31028-ABP35561 represent 4534 novel human proteins  
 CC designated ORF (open reading frame) 1-4534, and sequences ABN75054-  
 CC ABN75587 represent cDNAs encoding them. The invention also encompasses  
 CC polypeptides at least 80% identical to the ORF1-ORF4534 (collectively  
 CC referred to as ORFX) proteins, polynucleotides at least 85% identical to  
 CC the ORFX nucleic acid sequences, vectors and host cells comprising ORFX  
 CC polynucleotides, the recombinant production of ORFX proteins, antibodies  
 CC specific for ORFX proteins, methods of detecting ORFX polynucleotides and  
 CC polypeptides, methods of screening for modulators of ORFX expression or  
 CC activity, and methods of screening individuals for a predisposition to an  
 CC ORFX-associated disorder. The ORFX proteins of the invention have a wide  
 CC range of biological activities, such as cytokine, cell proliferation,  
 CC cell differentiation, immune modulation, haematopoiesis regulation,  
 CC tissue growth, angiogenesis, activin or inhibin activity, chemotactic/  
 CC chemokinetic activity, haemostatic activity, thrombolytic activity,  
 CC receptor/ligand, antiinflammatory activity, tumour inhibition activity,  
 CC and antiinfective activity, and may also be involved in the determination  
 CC of bodily characteristics, fertility and behaviour. ORFX proteins,  
 CC nucleic acids and antibodies may be used in the treatment of cancers,  
 CC other proliferative disorders such as psoriasis and benign tumours,  
 CC neurological disorders such as epilepsy and Alzheimer's disease,  
 CC cardiovascular diseases, immune system disorders, disorders related to  
 CC organ transplantation, disorders of tissue growth and regeneration,  
 CC diseases such as diabetes mellitus, hypothyroidism, and cholesterol ester  
 CC storage disease, and infectious diseases caused by viral, bacterial,  
 CC fungal and other pathogens. ORFX nucleic acids may also be used as a  
 CC source of primers and probes, in the detection of ORFX genomic sequences  
 CC or transcripts, in the identification and cloning of homologous  
 CC sequences, in genetic diagnosis, and in forensic biology. The ORFX  
 CC nucleic acids may additionally be used to produce transgenic animals  
 CC which may be useful for studying the function and/or activity of ORFX  
 CC protein, and in drug screening. The ORFX proteins may also be used as  
 CC immunogens to generate specific antibodies, which are useful in the

CC diagnosis, treatment and monitoring of ORFX-associated diseases.

XX Propionibacterium acnes polypeptides and nucleic acids useful for PT vaccinating against and diagnosing infections, especially useful for PT treating acne vulgaris -

XX Example 1; SEQ ID NO 8195; 1069pp; English.

XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic

CC polypeptides. The proteins and their associated DNA sequences are used in  
CC the treatment, prevention and diagnosis of medical conditions caused by  
CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,  
CC pustulosis, hyperostosis and osteomyelitis), uveitis and endophthalmitis.  
CC P. acnes is also involved in infections of bone, joints and the central  
CC nervous system, however it is particularly involved in the inflammatory  
CC lesions associated with acne vulgaris. A method for detecting the  
CC presence or absence of P. acnes in a patient comprises contacting a  
CC sample with a binding agent that binds to the proteins of the invention  
CC and determining the amount of bound protein in the sample. The  
CC polypeptides may be used as antigens in the production of antibodies  
CC specific for P. acnes proteins. These antibodies can be used to  
CC downregulate expression and activity of P. acnes polypeptides and  
CC therefore treat P. acnes infections. The antibodies may also be used as  
CC diagnostic agents for determining P. acnes presence, for example, by  
CC enzyme linked immunosorbent assay (ELISA).  
CC Note: The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences.

PT Examining the ischemic condition (e.g. occlusive ischemia) by measuring  
PT expression levels of particular genes defined in the specification or  
PT by determining the expression profile of a gene group comprising these  
PT genes -  
XX  
XX Claim 2; Page 1721-1722; 2690pp; English.  
XX  
XX The present invention describes a method for examining ischaemic  
CC conditions, comprising measuring the expression levels of particular  
CC genes (1) in a test sample or determining the expression profile of a  
CC gene group in the sample comprising genes selected from (1). The method  
CC is useful for examining the ischaemic condition (e.g. compressive  
CC ischaemia, occlusive ischaemia or vasospastic ischaemia) by measuring

CC expression levels of particular genes (AB199202 to AB199912, encoding  
CC the protein sequences in ABB57020 to ABB57374) or by determining the  
CC expression profile of a gene group comprising these genes. The  
CC expression levels or expression profiles produced by these genes are  
CC used as an indicator when screening for ischaemic condition-improving  
CC drugs or therapeutics for ischaemic diseases. AB199913 and AB199914  
CC represent PCR primers for a mouse ischaemic condition related sequence,  
CC which are used in the exemplification of the present invention.

PT Novel nucleic acids and polypeptides for diagnosis, treatment of  
PT inflammatory, autoimmune, nervous system, myeloid or lymphoid cell  
PT disorders, cancer and promoting wound healing -  
XX  
XX Claim 10; Page 672; 672pp; English.  
XX  
XX The invention relates to human novel polynucleotides and associated  
CC polypeptides. The polynucleotides and polypeptides are useful for  
CC treating inflammatory conditions such as arthritis, nephritis, Crohn's  
CC disease, ischaemia-reperfusion injury, shock, sepsis, immune responses

CC and cancer and for promoting wound healing. The sequences are used to  
 CC induce the proliferation of neural cells and regeneration of nerve and  
 CC brain tissue, and are useful for the treatment of central and peripheral  
 CC nervous system diseases and neuropathies, such as Alzheimer's disease,  
 CC Parkinson's disease, Huntington's disease and amyotrophic lateral  
 CC sclerosis. The sequences are involved in chemotactic or chemokinetic  
 CC activity, regulation of haematopoiesis, treatment of myeloid or lymphoid  
 CC cell disorders and platelet disorders such as thrombocytopenia,  
 CC regeneration of bone, cartilage, tendon, ligament and/or nerve tissue  
 CC growth, tissue repair, healing of burns, incisions, ulcers, treatment of  
 CC osteoporosis, osteoarthritis, bone degenerative disorders and periodontal  
 CC disease. The sequences of the invention are also useful for gut  
 CC protection or regeneration and treatment of lung or liver fibrosis,  
 CC reperfusion injury in various tissues, immune deficiencies and disorders  
 CC including severe combined immunodeficiency (SCID), bacterial or fungal  
 CC infections, autoimmune disorders e.g. multiple sclerosis and myasthenia  
 CC gravis, allergic conditions such as asthma, thrombolytic or thrombotic  
 CC and coagulation disorders. Sequences ABC65666-ABC66758 represent human  
 CC novel polypeptides of the invention.

PT Propionibacterium acnes polypeptides and nucleic acids useful for  
 PT vaccinating against and diagnosing infections, especially useful for

PT treating acne vulgaris -

XX Example 1: SEQ ID No 15685; 1069pp; English.

XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic  
 CC polypeptides. The proteins and their associated DNA sequences are used in  
 CC the treatment, prevention and diagnosis of medical conditions caused by  
 CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne,  
 CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.  
 CC P. acnes is also involved in infections of bone, joints and the central  
 CC nervous system, however it is particularly involved in the inflammatory  
 CC lesions associated with acne vulgaris. A method for detecting the  
 CC presence or absence of P. acnes in a patient comprises contacting a  
 CC sample with a binding agent that binds to the proteins of the invention  
 CC and determining the amount of bound protein in the sample. The  
 CC polypeptides may be used as antigens in the production of antibodies  
 CC specific for P. acnes proteins. These antibodies can be used to  
 CC downregulate expression and activity of P. acnes polypeptides and  
 CC therefore treat P. acnes infections. The antibodies may also be used as  
 CC diagnostic agents for determining P. acnes presence, for example, by  
 CC enzyme linked immunosorbent assay (ELISA).  
 CC Note: The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences.

P7	DNA encoding flea serine protease and aminopeptidase - useful in	
P7	vaccines to protect animals from flea infestation.	
XX		
PS	Claim 71: Page 137; 241pp: English.	
XX		
CC	This sequence (PfSP4-223) represents a flea midgut serine protease	
CC	encoded by the nfsP4-672 gene, isolated from a flea cDNA library by	
CC	homology with conserved serine protease sequences (e.g. AA001226).	
CC	Although the entire sequence is not highly conserved to that of	
CC	known serine proteases, it contains a conserved IVGQ sequence, and	
CC	active site His and Ser regions, a conserved GMG sequence, and	
CC	conserved Asp and Cys residues. The sequence contains sequence	
CC	AA001169 (PfSP4-52), which spans 2 conserved serine protease	
CC	sequences, N-terminal sequences AA001196 (PfSPI7), AA001178 and	
CC	AA001182, and a sequence similar to part of AA001187. The protein shows	
CC	homology to an Anopheles gambiae chymotrypsin-I precursor. The	
CC	protein may be used in a vaccine for protection of domestic animals	
CC	from flea infestation, or in isolation of protease-inhibitors, which	
CC	may be used in controlled release formulations to reduce the flea	
CC	burden on and around the animal. The inhibitors may be included in	
CC	insecticidal compositions to increase efficacy of other active	
CC	agents, by reducing proteolytic activity in the flea midgut.

CC putative substrate binding site of rat mast cell protease II. The  
CC crystallographic structure of this region was used as a template  
CC structure to model the structure of the substrate-binding pocket  
CC of mouse mast cell protease 7 (MCP-7, see AAW64233). The invention  
CC relates to MCP-7 and related tryptase-7 proteases that can be used  
CC to prevent or inhibit fibrin clot formation. Such proteases can be  
CC used to treat disorders mediated by undesirable thrombus clot  
CC formation such as myocardial infarction and reocclusion following  
CC angioplasty of blood clots associated with pulmonary  
CC thromboembolism, deep vein thrombosis, cerebral embolism, renal  
CC vein and peripheral arterial thrombosis.

XX  
CC This sequence is the human chymase protein. The invention relates to  
CC a method for the preparation of active human chymase by transformation of  
CC a yeast host with a secretion expression vector containing DNA encoding  
CC mature human chymase, and culturing of the cells to give active human

CC chymase. The recombinant DNA can be used to produce the human chymase  
CC protein. Using the method, human chymase can be produced easily and cost  
CC effectively.

RT "Molecular cloning and characterization of novel human trypsin cDNAs
RL Submitted (NOV-1999) to the EMBL/GenBank/DDBJ databases.
CC -1- FUNCTION: This seems to be the product of a pseudogene, it is
CC probably not expressed.
CC -1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. TRYPTASE SUBFAMILY.

Cc CC -I- FUNCTION: TRYPTASE IS THE MAJOR NEUTRAL PROTEASE PRESENT IN MAST
Cc CELLS AND IS SECRETED UPON THE COUPLED ACTIVATION-DEGRADULATION
Cc RESPONSE OF THIS CELL TYPE.
Cc CC -I- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but
Cc CC with more restricted specificity than trypsin.
Cc CC -I- SUBUNIT: HOMOTETRAMER.

```

CC -1- SUBCELLULAR LOCATION: RELEASED FROM THE SECRETORY GRANULES UPON  
CC MAST CELL ACTIVATION.  
CC -1- ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are  
CC produced by alternative splicing.  
CC -1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. TRYPTASE SUBFAMILY.

 RT 17p11.2.";  
 RL Genomics 59:339-341(1999).  
 CC -1- FUNCTION: MEDIATES THE TRANSCRIPTIONAL REPRESSION ACTIVITY OF SOME  
 CC NUCLEAR RECEPTORS BY PROMOTING CHROMATIN CONDENSATION, THUS  
 CC PREVENTING ACCESS OF THE BASAL TRANSCRIPTION.  
 CC -1- SUBUNIT: FORMS A LARGE COREPRESSOR COMPLEX THAT CONTAINS SIN3A/B  
 CC AND HISTONE DEACETYLASES HDAC1 AND HDAC2. THIS COMPLEX ASSOCIATES  
 CC WITH THE THYROID (TR) AND THE RETINOIC ACID RECEPTORS (RAR) IN THE  
 CC ABSENCE OF LIGAND.  
 CC -1- SUBCELLULAR LOCATION: Nuclear (By similarity).  
 CC -1- DOMAIN: THE N-TERMINAL REGION CONTAINS REPRESSION FUNCTIONS THAT  
 CC ARE DIVIDED INTO THREE INDEPENDANT REPRESSION DOMAINS (RD1, RD2  
 CC AND RD3). THE C-TERMINAL REGION CONTAINS THE NUCLEAR RECEPTOR-  
 CC INTERACTING DOMAINS THAT ARE DIVIDED IN TWO SEPARATE INTERACTION  
 CC DOMAINS (ID1 AND ID2).  
 CC -1- DOMAIN: THE TWO INTERACTION DOMAINS (ID) CONTAIN A CONSERVED  
 CC SEQUENCE REFERRED TO AS THE CORNR BOX. THIS MOTIF IS REQUIRED AND  
 CC SUFFICIENT TO PERMIT BINDING TO UNLIGANDED TR AND RARs. SEQUENCES  
 CC FLANKING THE CORNR BOX DETERMINE NUCLEAR HORMONE RECEPTOR  
 CC SPECIFICITY.  
 CC -1- SIMILARITY: CONTAINS 1 SANT-A DOMAIN.  
 CC -1- SIMILARITY: CONTAINS 1 MYB-LIKE DOMAIN.  
 CC -1- SIMILARITY: CONTAINS 2 CORNR BOXES.  
 CC -1- SIMILARITY: BELONGS TO THE N-COR NUCLEAR RECEPTOR COREPRESSORS  
 CC FAMILY.

 CC -I- FUNCTION: TRYPTASE IS THE MAJOR NEUTRAL PROTEASE PRESENT IN MAST  
 CC CELLS, AND IS SECRETED UPON THE COUPLED ACTIVATION-DEGRANULATION  
 CC RESPONSE OF THIS CELL TYPE.  
 CC -I- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but  
 CC with more restricted specificity than trypsin.  
 CC -I- ALTERNATIVE PRODUCTS: 2 isoforms, a long form (shown here) and a  
 CC truncated form; are produced by alternative splicing. The  
 CC alternative splicing event is due to a G to A point mutation at  
 CC the exon 2/intron 2 splice site and causes loss of protein  
 CC expression. The alternatively spliced transcript is only found in  
 CC C57BL/6 mouse.  
 CC -I- DEVELOPMENTAL STAGE: IS NOT EXPRESSED IN MATURE SEROSAL OR  
 CC MUCOSAL MAST CELLS AND IS EXPRESSED ONLY TRANSIENTLY AT AN EARLY  
 CC STAGE OF IN VITRO MAST CELL DIFFERENTIATION.  
 CC -I- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. TRYPTASE SUBFAMILY.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

XX      PT New vaccine for treatment of Schistosoma infections contains a
XX      recombinant fusion protein comprising cercarial elastase sequence fused
XX      to bacterial, phage or viral protein -
XX      Claim 2; Fig 1; 26pp; English.
XX      PS The invention provides a vaccine comprising a recombinant fusion protein
XX      capable of eliciting immunity against Schistosoma parasites. The fusion
XX      protein comprises the 27 or 28 kDa cercarial elastase sequence of
XX      S. mansoni or an active fragment, homologue or variant, fused to a
XX      bacterial, phage or viral protein. The vaccine containing the fusion
XX      protein has been found to induce a significantly increased antibody
XX      response against schistosoma infections, compared to the use of S.
XX      CC mansoni cercarial elastase in its native form. The present sequence
XX      represents the S. mansoni cercarial elastase gene.

PT New antisense oligonucleotides useful for treating e.g. pulmonary  
PT vasoconstriction, inflammation, allergies, asthma, hypertension,  
PT bronchitis, emphysema, respiratory distress syndrome, ischemia or  
PT cancers -

PS Disclosure; Page 810-814; 1343pp; English

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have anti-inflammatory, antiallergic, antiasthmatic, cyostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impacted airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischemic conditions, pulmonary vasoconstriction, allergies, asthma, impacted respiration, respiratory distress syndrome, pain, cystitis, fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukemias, lymphomas, carcinomas, and cancers which may metastasize to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA2331 to AAA3332 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2615, and then the last 165 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA33323 to AAA33392) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence listing.

 XX  
 XX This nucleotide sequence includes a coding region for mouse mast  
 CC cell protease 6 (mMCP-6, see AAM64242). The invention provides:  
 CC compositions comprising an isolated tryptase-7 (such as mMCP-7, see  
 CC AAM64233); a method for treating a blood clot by administering a  
 CC nucleic acid molecule that codes for a tryptase-7, or an expression  
 CC product; a nucleic acid encoding a serine protease (SP); and a  
 CC method of producing a mature SP. Tryptase-7 polypeptides can be  
 CC used for treating disorders mediated by undesirable thrombus clot  
 CC formation such as myocardial infarction and reocclusion following  
 CC angioplasty of blood clots associated with pulmonary  
 CC thromboembolism, deep vein thrombosis, cerebral embolism, renal  
 CC vein and peripheral arterial thrombosis.

PT New coosultions containing tryptase-7, eg. mouse mast cell  
PT protease-7 - are used to treat clot formation in e.g. myocardial  
PT infarction, reocclusion following angioplasty or pulmonary  
PT thromboembolism  
XX  
PS Disclosure, Page 68-69, 92pp; English.

This nucleotide sequence includes a coding region for mouse mast cell protease 6 (mMCP-6, see AAM6424). The invention provides compositions comprising an isolated tryptase-7 (such as mMCP-7, see AAM6423), a method for treating a blood clot by administering a nucleic acid molecule that codes for a tryptase-7, or an expression product; a nucleic acid encoding a serine protease (SP); and a method of producing a mature SP. Tryptase-7 polypeptides can be used for treating disorders mediated by undesirable thrombus clot formation such as myocardial infarction and reocclusion following angioplasty of blood clots associated with pulmonary thromboembolism, deep vein thrombosis, cerebral embolism, renal vein and peripheral arterial thrombosis.

New compositions containing tryptase-7, e.g. mouse mast cell

protease-7 - are used to treat clot formation in e.g. myocardial

infarction, reocclusion following angioplasty or pulmonary

thromboembolism

Disclosure; Page 63; 92pp; English.

This nucleotide sequence includes a coding region for human

mast cell tryptase alpha (see AAM64237). The invention provides:

compositions comprising an isolated tryptase-7 that may include

chimeric proteins that contain (a) a human tryptase for all but

the active site region and (b) the substrate-binding pocket of

mouse tryptase-7 or its homologues (see AAM64233-36); a method for

treating a blood clot by administering a nucleic acid molecule that

codes for a tryptase-7, or an expression product, to decrease

fibinogen activity; a nucleic acid encoding a serine protease

(SP); and a method of producing a mature SP by expressing the

inactive zymogen in a host cell, and cleaving the enterokinase

susceptibility domain. The tryptase-7 polypeptides can be used to

treat disorders mediated by undesirable thrombus clot formation

such as myocardial infarction and reocclusion following angioplasty

of blood clots associated with pulmonary thromboembolism, deep vein

thrombosis, cerebral embolism, renal vein and peripheral arterial

thrombosis. They are also useful for all surgical procedures that

require decreased blood clots.

 XX  
 CC The present invention describes a new composition comprising an  
 CC antisense oligonucleotide (ON) with low adenosine (up to 15%), which  
 CC targets nucleic acids involved in bronchoconstriction, allergies, and/or  
 CC inflammation. The ON can have antiinflammatory, antiallergic,  
 CC antiasthmatic, cyostatic and analgesic activities. The compositions are  
 CC useful for the treatment of diseases associated with inflammation,  
 CC impaired airways, including lung disease and diseases whose secondary  
 CC effects afflict the lungs of a subject. They can be used for treating  
 CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies,  
 CC asthma, impeded respiration, respiratory distress syndrome, pain, cystic  
 CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
 CC pulmonary disease (COPD), and cancers such as leukemias, lymphomas,  
 CC carcinomas, and cancers which may metastasize to the lungs, including  
 CC breast and prostate cancer. The reduction of the adenosine content of  
 CC the ONs reduces side effects. The A-containing ONs break down with the  
 CC release of deoxyadenosine which activates adenosine receptors causing  
 CC bronchoconstriction and inflammation. AAA3213 to AAA3512 represent the  
 CC nucleotide sequences given in the sequence listing from the present  
 CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last  
 CC 185 sequences are also called SEQ ID NO:1 to 185, but the sequences  
 CC differ from the previously named sequences. SEQ ID NO:11 to 1680  
 CC (AAA3233 to AAA3392) are specifically claimed ONs from the present  
 CC invention. N.B. Sequences given in the disclosure of the present  
 CC invention do not match up with their corresponding SEQ ID NO: sequences  
 CC given in the sequence listing.

 PT Low adenosine (A) content antisense oligonucleotides which do not  
 PT trigger adenosine receptors during metabolism, useful e.g. for treating  
 PT cancers and respiratory obstructions -  
 XX  
 PS Disclosure; Page 877-878; 1592pp; English.  
 XX

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'universal' or alternative base (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antisthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and/or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system peptide transmitters, defensins, growth factors, vasoactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. APr1834 to APr2153 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of the present invention.

New antisense oligonucleotides useful for treating e.g. pulmonary vasoconstriction, inflammation, allergies, asthma, hypertension, bronchitis, emphysema, respiratory distress syndrome, ischemia or cancers -

Disclosure; Page 805-806; 1343pp; English.

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cyostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukemias, lymphomas, carcinomas, and cancers which may metastasize to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-containing ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA3512 represent the nucleotide sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences are also called SEQ ID NO:1 to 185, but the sequences differ from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to AAA33992) are specifically claimed ONs from the present invention. N.B. Sequences given in the disclosure of the present invention do not match up with their corresponding SEQ ID NO: sequences given in the sequence listing.

XX DNA construct for producing enzymatically-inactive proteolytic

PT tryptase, comprises DNA sequence encoding proteolytic tryptase having

PT an active site mutation -

XX Disclosure; Page 69-70; 126pp; English.

XX The present invention relates to recombinant human proteolytic  
 CC tryptases, active site mutants of these tryptases and the methods for  
 CC producing these. The method involves the production of a DNA expression  
 CC construct comprising a promoter operably linked to a secretion signal  
 CC sequence which is operably linked to a DNA sequence encoding a  
 CC proteolytic tryptase with an active site mutation (the construct drives

CC expression of a mature proteolytic tryptase that lacks enzymatic activity  
 CC due to the active site mutation, in hosts transformed to contain the  
 CC construct). The method is useful for producing enzymatically-active  
 CC beta-II tryptase. The active site mutants of proteolytic tryptase provide  
 CC a tool to investigate the structural and functional properties of the  
 CC protease and its enzymatic activity, and for modelling studies. The  
 CC enzymatically-active, recombinant proteolytic tryptase produced are  
 CC useful as an antigen to generate anti-human tryptase antibodies  
 CC and in drug screening for compounds which act as tryptase inhibitors,  
 CC antagonists, agonists, etc. The present sequence encodes for human  
 CC mature beta-I tryptase.

CC tryptases, active site mutants of these tryptases and the methods for  
CC producing these. The method involves the production of a DNA expression  
CC construct comprising a promoter operably linked to a secretion signal  
CC sequence which is operably linked to a DNA sequence encoding a  
CC proteolytic tryptase with an active site mutation (the construct drives  
CC expression of a mature proteolytic tryptase that lacks enzymatic activity  
CC due to the active site mutation, in hosts transformed to contain the  
CC construct). The method is useful for producing enzymatically-active  
CC beta-II tryptase. The active site mutants of proteolytic tryptase provide  
CC a tool to investigate the structural and functional properties of the  
CC protease and its enzymatic activity, and for modelling studies. The  
CC enzymatically-active, recombinant proteolytic tryptase produced are  
CC useful as an antigen to generate anti-human tryptase antibodies  
CC and in drug screening for compounds which act as tryptase inhibitors,  
CC antagonists, agonists, etc. AAS20775-AAS20790 encode for recombinant  
CC human beta-II tryptase active site mutants.

XX PS Disclosure; Page 64-65; 92pp; English.

CC This nucleotide sequence includes a coding region for human  
CC mast cell tryptase I (see AAW64238). The invention provides:  
CC compositions comprising an isolated tryptase-7 that may include  
CC chimeric proteins that contain (a) a human tryptase for all but  
CC the active site region and (b) the substrate-binding pocket of  
CC mouse tryptase-7 or its homologues (see AAW64233-39); a method for  
CC treating a blood clot by administering a nucleic acid molecule that  
CC codes for a tryptase-7, or an expression product, to decrease  
CC fibrinogen activity; a nucleic acid encoding a serine protease  
CC (SP), and a method of producing a mature SP by expressing the  
CC inactive zymogen in a host cell, and cleaving the enterokinase  
CC susceptibility domain. The tryptase-7 polypeptides can be used to  
CC treat disorders mediated by undesirable thrombus clot formation  
CC such as myocardial infarction and reocclusion following angioplasty  
CC of blood clots associated with pulmonary thromboembolism, deep vein  
CC thrombosis, cerebral embolism, renal vein and peripheral arterial  
CC thrombosis. They are also useful for all surgical procedures that  
CC require decreased blood clots.

Sequence 1137 BP; 196 A; 410 C; 328 G; 203 T; 0 other;

CC The present invention describes low adenosine (A) content antisense  
CC oligonucleotides and compositions (I) comprising them. In the antisense  
CC oligonucleotides the A is replaced by a 'universal' or alternative base.  
CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,  
CC immunosuppressive, antiallergic, hypotensive and cytostatic activities.  
CC The antisense oligonucleotides and (I) can be used to down-regulate the  
CC expression and/or activity of target polypeptides associated with  
CC lung/respiratory disorders and malignancies, such as stimulating and  
CC activating peptide factors and transmitters, transcription factors,  
CC immunoglobulin and antibodies, antibody receptors, cytokines and  
CC chemokines, endogenously produced specific and non-specific enzymes,  
CC binding proteins, adhesion molecules and their receptors, cytokine and  
CC chemokine receptors, adenosine receptors, bradykinin receptors, central  
CC nervous system (CNS) and peripheral nervous and non-nervous system  
CC receptors, CNS and peripheral nervous and non-nervous system peptide  
CC transmitters, defensive, growth factors, vasoactive peptides and  
CC receptors, binding proteins and malignancy associated proteins. The  
CC antisense oligonucleotides may be used in this way to treat disorders  
CC including respiratory obstruction (especially pulmonary obstruction  
CC and/or bronchoconstriction) and/or lung inflammation, allergy(ies)  
CC and/or surfactant hypoproduction which are associated with a disease or  
CC condition selected from pulmonary vasoconstriction, inflammation,  
CC allergies, asthma, impeded respiration, respiratory distress syndrome  
CC (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary  
CC hypertension, emphysema, chronic obstructive pulmonary disease (COPD),  
CC pulmonary transplantation rejection, pulmonary infections, bronchitis,  
CC and/or cancer. AAF18434 to AAF21543 represent human polynucleotide  
CC fragments and antisense oligonucleotides used in the exemplification of  
CC the present invention.

PT New antisense oligonucleotides useful for treating e.g. pulmonary  
PT vasoconstriction, inflammation, allergies, asthma, hypertension,  
PT bronchitis, emphysema, respiratory distress syndrome, ischemia or  
PT cancers -

PS Disclosure; Page 807-808; 1343pp; English.

XX The present invention describes a new composition comprising an  
CC antisense oligonucleotide (ON) with low adenosine (up to 15%), which  
CC targets nucleic acids involved in bronchoconstriction, allergies, and/or  
CC inflammation. The ON can have antiinflammatory, antiallergic,  
CC antiaesthetic, cytostatic and analgesic activities. The compositions are  
CC useful for the treatment of diseases associated with inflammation,  
CC impaired airways, including lung disease and diseases whose secondary  
CC effects afflict the lungs of a subject. They can be used for treating  
CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies,  
CC asthma, impeded respiration, respiratory distress syndrome, pain, cystic  
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
CC pulmonary disease (COPD), and cancers such as leukemia, lymphomas,  
CC carcinomas, and cancers which may metastasize to the lungs, including  
CC breast and prostate cancer. The reduction of the adenosine content of  
CC the ON reduces side effects. The A-containing ONs break down with the  
CC release of deoxyadenosine which activates adenosine receptors causing  
CC bronchoconstriction and inflammation. AAA3313 to AAA3512 represent the  
CC nucleotide sequences given in the sequence listing from the present  
CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last  
CC 185 sequences are also called SEQ ID NO:1 to 185, but the sequences  
CC differ from the previously named sequences. SEQ ID NO:11 to 1680  
CC (AAA33323 to AAA33992) are specifically claimed ONs from the present  
CC invention. N.B. Sequences given in the disclosure are from the present  
CC invention do not match up with their corresponding SEQ ID NO: sequences  
CC given in the sequence listing.

CC effects afflict the lungs of a subject. They can be used for treating  
CC e.g. ischemic conditions, pulmonary vasoconstriction, allergies,  
CC asthma, impeded respiration, respiratory distress syndrome, pain, cystic  
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
CC pulmonary disease (COPD), and cancers such as leukaemia, lymphomas,  
CC carcinomas, and cancers which may metastasise to the lungs, including  
CC breast and prostate cancer. The reduction of the adenine content of  
CC the ONS reduces side effects. The A-containing ONS break down with the  
CC release of deoxyadenosine which activates adenosine receptors causing the  
CC bronchoconstriction and inflammation. AAA3213 to AAA3532 represent the  
CC nucleotide sequences given in the sequence listing from the present  
CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last  
CC 185 sequences are also called SEQ ID NO:1 to 185, but the sequences  
CC differ from the previously named sequences. SEQ ID NO:11 to 1680  
CC (AAA3223 to AAA3992) are specifically claimed ONS from the present  
CC invention. N.B. Sequences given in the disclosure of the present  
CC invention do not match up with their corresponding SEQ ID NO: sequences  
CC given in the sequence listing.

XX Claim 5; Page 149-150; 151pp; English.  
XX  
XX  
XX The invention relates to human proteases (PRTS1-14) and its corresponding  
XX cDNA molecules. Human PRTS and its nucleic acid molecule are useful for  
XX the diagnosis, treatment and prevention of disorders associated with  
XX increased or decreased expression of PRTS. Examples of such disorders  
XX include, cell proliferative disorders (arteriosclerosis, atherosclerosis,  
XX hepatitis, psoriasis and cancers); autoimmune/inflammatory disorders  
XX (AIDS, Addison's disease, allergy, anaemia, asthma, atopic dermatitis,  
XX diabetes mellitus, glomerulonephritis, multiple sclerosis, osteoporosis,  
XX trauma, Grave's disease, rheumatoid arthritis, ulcerative colitis, and  
XX viral, bacterial, fungal, parasitic, protozoal and helminthic  
XX infections); cardiovascular disorders (myocardial infarction, ischaemic  
XX heart disease and hypertension); neurological disorders (epilepsy,  
XX Alzheimer's disease, Pick's disease, Huntington's disease, dementia,  
XX Parkinson's disease, stroke, mental disorders including mood, anxiety  
XX and seasonal affective disorder and prion diseases); gastrointestinal  
XX disorders (Crohn's disease, anorexia, nausea, diarrhoea and jaundice);  
XX epithelial disorders (contact dermatitis, eczema, acne vulgaris,  
XX alopecia, scabies, insect bites and urticaria); reproductive disorder  
XX (infertility); disruption of estrous and menstrual cycle and  
XX gynaecomastia); and developmental disorders (renal tubular acidosis,  
XX Cushing's syndrome, seizure disorders, congenital glaucoma and cataract).  
XX PRTS DNA is also in useful in gene therapy. PRTS and its immunogenic  
XX fragments are useful for screening libraries of compounds in several drug  
XX screening assays. The present sequence is human protease PRTS-13 cDNA.

Title: US-10-020-441-2

Perfect score: 106  
Sequence: 1 VSFLLTNNGDQGIHQPSG.....YGRDDNDPDRKNGKILKK 106

Scoring table: OLIGO  
Gapop 60.0 , Gapext 60.0

Searched: 112892 seqs, 41476328 residues

Word size: 0

Total number of hits satisfying chosen parameters: 112892

Minimum DB seq length: 0

Maximum DB seq length: 2000000000

Post-processing: Listing first 1000 summaries

Database: SwissProt\_40.\*

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

RT "Expression cloning of a GM3-specific alpha-2,8-sialyltransferase
RT (GD3 synthase)."
RL J. Biol. Chem. 269:15950-15956(1994).
CC -I- FUNCTION: Involved in the production of GD3 and GT3 from GM3.
CC -I- CATALYTIC ACTIVITY: CMP-N-acetylneuraminate + alpha-N-
CC acetylneuraminy-1-2,3-beta-D-galactosyl-R = CMP + alpha-N-
CC acetylneuraminy-1-2,8-alpha-N-acetylneuraminy-1-2,3-beta-D-
CC galactosyl-R.
CC -I- PATHWAY: Glycosylation.
CC -I- SUBCELLULAR LOCATION: Type II membrane protein. Golgi (potential).
CC -I- TISSUE SPECIFICITY: STRONGLY EXPRESSED IN MELANOMA CELL LINES,
CC ADULT AND FETAL BRAIN AND TO A LESSER EXTENT IN ADULT AND FETAL
CC LUNG.
CC -I- SIMILARITY: BELONGS TO THE GLYCOSYLTRANSFERASE FAMILY 29.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Sequence 15, Application US/07706691G
Patent No. 5340735
GENERAL INFORMATION:
APPLICANT: Goddette, Dean W
TITLE OF INVENTION: Third Generation Protease Mutants
NUMBER OF SEQUENCES: 104
CORRESPONDENCE ADDRESS:
ADDRESSEE: Henkel Corporation
STREET: 140 Germantown Pike, Suite 150
CITY: Plymouth Meeting
STATE: Pennsylvania
COUNTRY: USA
ZIP: 19462
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/706.691G
CLASSIFICATION: 435
FILING DATE: 19910529
ATTORNEY/AGENT INFORMATION:
NAME: Drach, John E.
REGISTRATION NUMBER: 32891
REFERENCE/DOCKET NUMBER: M4922
TELECOMMUNICATION INFORMATION:
TELEPHONE: 215-832-2215
TELEFAX: 215-941-6067
INFORMATION FOR SEQ ID NO: 15:
SEQUENCE CHARACTERISTICS:
LENGTH: 269 amino acids
TYPE: AMINO ACID
TOPOLOGY: unknown
MOLECULE TYPE: protein
HYPOTHETICAL: NO
ANTI-SENSE: NO
ORIGINAL SOURCE:
ORGANISM: Serine Protease
STRAIN: Bacillus lentus DSM 5843
IMMEDIATE SOURCE:
CLONE: V41, A188P, V193M
US-07-706-691G-15

Query Match 5.7%; Score 6; DB 1; Length 269;
Best Local Similarity 100.0%; Pred. No. 1.6e+02;
Matches 6; Conservative 0; Mismatches 0; Indels 0; Gaps 0;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

PT New vaccine for treatment of Schistosoma infections contains a  
PT recombinant fusion protein comprising cercarial elastase sequence fused  
PT to bacterial, phage or viral protein -  
XX  
PS Claim 3; Page 17; 26pp; English.  
XX  
CC The invention provides a vaccine comprising a recombinant fusion protein  
CC capable of eliciting immunity against Schistosoma parasites. The fusion  
CC protein comprises the 27 or 28 kDa cercarial elastase sequence of  
CC S. mansoni or an active fragment, homologue or variant, fused to a  
CC bacterial, phage or viral protein. The vaccine containing the fusion  
CC protein has been found to induce a significantly increased antibody  
CC response against schistosoma infections, compared to the use of S.  
CC mansoni cercarial elastase in its native form. The present sequence  
CC represents the S. mansoni cercarial elastase protein fragment encoded by  
CC exon 2 of the cercarial elastase gene, used in the fusion protein of the  
CC invention.

PT Identifying signal oligopeptide(s) in protein sequence(s) - shown as  
 PT regions of max. hydrophilicity, used in modulating communication  
 PT between protein(s)

XX  
 PS Claim 5; Page 69; 88pp; English.

XX  
 CC The sequences given in AAW21201-560 represent hydrophilic signal oligo-  
 CC peptides. These signal oligopeptides are localised on the surface  
 CC of the protein and are represented by the hydrophilicity maxima of  
 CC the protein. These peptides are enriched in charged amino acids  
 CC arranged with neutral spacer amino acids. The specific signal  
 CC character of these oligopeptides is determined by a characteristic  
 CC combination of conformation and charge within the signal sequence.

CC These oligopeptides may be used as vaccines in the treatment of  
 CC human disease, as competitive inhibitors to prevent or reduce the  
 CC metabolic action or interaction of a selected protein by blocking  
 CC its specific signal sequences, or as therapeutic agents to function  
 CC as feedback regulators to reduce synthesis rate of a selected protein.  
 CC These peptides may be modified by omitting one or more amino acids at  
 CC the N- and/or C-terminal, by substituting one or more amino acids  
 CC without consideration of charge and polarity, by substituting one or  
 CC more amino acids with amino acid residues with similar charge and/or  
 CC polarity, by omitting one or more amino acids or a combination of these.

PT New alpha-2,8-sialyl transferase - useful for producing

PS physiologically active sugar chains

PS Claim 1; Page 63-66; 102pp; Japanese.

CC The amino acid sequence of the novel human alpha-2,8-sialyltransferase.

CC The gene encodes a protein of 356 a.a. The gene (called WPI) was

CC isolated from the human melanoma cell line WM266-4 and cloned into the

CC E.coli plasmid pUC119 to create pUC119.WPI. The gene was inserted into

CC the expression vector pAMOPRC3sc to produce the plasmid pAMOPRC3sc.WPI.

CC The missing N-terminal 19 a.a. were inserted into this vector by PCR

CC amplification using the primers AAQ77835-6 Alpha-2,8-sialyltransferase

CC is useful in the production of physiologically active sugar chains

CC e.g. in the conversion of ganglioside GM3 to GD3.

 XX Selecting a crossover locations in biopolymers, useful for particularly  
 XX useful designing, engineering and generating new proteins and genes  
 XX with useful properties, by determining the crossover disruption  
 XX profiles of biopolymers -

XX Examples; Fig 3; 139pp; English.  
 PS  
 XX  
 XX The present invention relates to methods for identifying crossover  
 CC locations in a polymer including nucleic acids and proteins. The  
 CC method involves selecting a crossover location in a first biopolymer  
 CC having a first polymer sequence, for recombination with one or more  
 CC second biopolymers each having its own polymer sequence. The method  
 CC comprises determining a crossover disruption related to the number of  
 CC coupling interactions disrupted in the crossover mutant represented  
 CC by a data structure. The method is useful for the directed evolution  
 CC of polymers, including directed evolution of nucleic acids and proteins.  
 CC The methods are particularly useful for designing, engineering and  
 CC generating hybrid biopolymers. The methods are also useful for  
 CC accelerating the production of new proteins and genes with novel and  
 CC useful properties. The present sequence representing Klebsiella  
 CC pneumoniae beta-lactamase-like (cephalosporinase) protein is used in  
 CC crossover studies in the methods of the present invention.

 XX New isolated polynucleotide and encoded polypeptides, useful in  
 PT diagnostics, forensics, gene mapping, identification of mutations  
 PT responsible for genetic disorders or other traits and to assess  
 PT biodiversity -  
 XX  
 PS Claim 20; SEQ ID No 35033; 103pp; English.  
 XX  
 XX The invention relates to isolated polynucleotide (I) and  
 CC polypeptide (II) sequences. (I) is useful as hybridisation probes,  
 CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome  
 CC and gene mapping, and in recombinant production of (II). The  
 CC polynucleotides are also used in diagnostics as expressed sequence tags

CC for identifying expressed genes. (I) is useful in gene therapy techniques  
CC to restore normal activity of (II) or to treat disease states involving  
CC (II). (II) is useful for generating antibodies against it, detecting or  
CC quantitating a polypeptide in tissue, as molecular weight markers and as  
CC a food supplement. (II) and its binding partners are useful in medical  
CC imaging of sites expressing (II). (I) and (II) are useful for treating  
CC disorders involving aberrant protein expression or biological activity.  
CC The polypeptide and polynucleotide sequences have applications in  
CC diagnostics, forensics, gene mapping, identification of mutations  
CC responsible for genetic disorders or other traits to assess biodiversity  
CC and to produce other types of data and products dependent on DNA and  
CC amino acid sequences. ABG00010-ABG30377 represent novel human  
CC diagnostic amino acid sequences of the invention.  
CC Note: The sequence data for this patent did not appear in the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences.

PT Converting epidermal cells into neurons, useful for isolating nerve  
PT growth factors or for gene therapy, comprises differentiating cells  
PT and transfecting with vectors with a CDNA coding neurogenic  
PT transcription factors -  
XX  
XX Example 2; Column 39-44; 27pp; English.  
XX  
CC The present sequence is myelin transcription factor 1 (MYT1), which  
CC is encoded by a human gene in Genbank. The Genbank sequence was used to  
CC provide sequence information for the cloning of MYT1 cDNA, which was  
CC used to transfect cultured epidermal cells. This was part of a novel  
CC method for transdifferentiating an epidermal basal cell into a cell

CC having the morphological, physiological and/or immunological features of  
CC a viable neuronal cell. The method is useful for screening new drugs for  
CC treating a nervous system disorder, or for isolating a novel nerve  
CC growth factor. The transdifferentiated cell is useful in both cell and  
CC gene therapies aimed at alleviating various neurological disorders. The  
CC cell or gene therapy approach involves the use of autologous  
CC transplantation or grafting of the newly created neuronal cells as  
CC treatment for brain or spinal cord injury, stroke and neurodegenerative  
CC diseases (e.g. Parkinson's disease, Huntington's disease or Alzheimer's  
CC disease).

XX Novel nucleic acids and peptides derived from open reading frame X,  
 PT useful for treating e.g. cancers, proliferative disorders,  
 PT neurodegenerative disorders and cardiovascular disease -  
 PS Claim 11; Page 3402-3404; 5507pp; English.

XX AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,  
 CC sequences have activities such as: cytosolic; hepatotropic; vulnary;  
 CC antiparkinsonian; neurotrophic; neuroprotective;  
 CC osteoporotic; anticonvulsant; antidiabetic; immunosuppressant;  
 CC immunostimulant; cardiant; thrombolytic; coagulant; vasotropic;  
 CC antidiabetic; hypotensive; dermatological; immunosuppressive;

CC antiinflammatory; antibacterial; antiviral; antifungal; antineumatic;  
 CC antihydrolyd; and antianaemic. The sequences can be used for determining  
 CC the presence of or predisposition to, or preventing or treating  
 CC pathological conditions associated with an ORFX-associated disorder. The  
 CC nucleic acids can be used to express ORFX proteins in gene therapy  
 CC vectors. The proteins and nucleic acids may be used to treat cancers,  
 CC proliferative disorders, neurodegenerative disorders, osteoarthritis,  
 CC graft vs host disease, cardiovascular disease, diabetes mellitus,  
 CC hypertension, hypothyroidism, cholesterol ester storage, systemic lupus  
 CC erythematosus, severe combined immunodeficiency (SCID), AIDS, viral,  
 CC bacterial or fungal infection, malaria, autoimmune disorders, asthma,  
 CC allergies, aplastic anaemia, burns, wounds, bone and cartilage damage,  
 CC nocturnal haemoglobinuria, antiinflammatory disease; to enhance  
 CC coagulation; to inhibit thrombosis; and as a contraceptive.

XX New isolated nucleic acid detection reagent for detecting 1000 or more  
 PT genes from Drosophila and for elucidating cell signalling and cell-cell  
 PT interactions -  
 PS Disclosure; SEQ ID NO 20796; 21pp + Sequence Listing; English.

XX The invention relates to an isolated nucleic acid detection reagent  
 CC capable of detecting 1000 or more genes from Drosophila. The invention is  
 CC useful in developmental biology and in elucidating cell signalling and  
 CC cell-cell interactions in higher eukaryotes for the development of  
 CC insecticides, therapeutics and pharmaceutical drugs. The invention  
 CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA  
 CC sequences (ABL01840-ABL16175) and the encoded proteins  
 CC (ABBS7737-ABBS72072).  
 CC The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO

CC at ftp.wipo.int/pub/published\_pct\_sequences.

XX  
XX  
PS Claim 5; Page 70; 88pp; English.  
XX  
XX The sequences given in AAW21201-560 represent hydrophilic signal oligo-  
CC peptides. These signal oligopeptides are localised on the surface  
CC of the protein and are represented by the hydrophilicity maxima of  
CC the protein. These peptides are enriched in charged amino acids  
CC arranged with neutral spacer amino acids. The specific signal  
CC character of these oligopeptides is determined by a characteristic  
CC combination of conformation and charge within the signal sequence.  
CC These oligopeptides may be used as vaccines in the treatment of  
CC human disease, as competitive inhibitors to prevent or reduce the  
CC metabolic action or interaction of a selected protein by blocking  
CC its specific signal sequences, or as therapeutic agents to function  
CC as feedback regulators to reduce synthesis rate of a selected protein.  
CC These peptides may be modified by omitting one or more amino acids at  
CC the N- and/or C-terminal, by substituting one or more amino acids  
CC without consideration of charge and polarity, by substituting one or  
CC more amino acids with amino acid residues with similar charge and/or  
CC polarity, by omitting one or more amino acids or a combination of these.

PT A set of peptide ligands consisting of specific complementary peptides  
PT to proteins encoded by genes of the human genome, useful in an assay  
PT for screening and identifying of one or more novel peptides which are  
PT drug candidates or pro-drugs -

XX Example 4; Page 354; 646pp; English.  
PS  
CC The invention relates to a set of complementary peptide ligands  
CC generated from the human genome. The complementary peptides  
CC interact with their relevant target proteins encoded in the human  
CC genome. They can be used as reagents in drug discovery and as lead  
CC ligands to facilitate drug design and development. The present  
CC sequence is a complementary peptide provided in the specification.

XX New mutant proteins having lower allergenic response in humans useful  
PT in cleaning compositions, animal feed and treating textiles -  
PT  
XX  
XX Example 2, Fig 6a; 43pp; English.

This sequence is a fragment of the *Bacillus lentus* protease. The invention relates to protease variants comprising a substitution at least 1 of the positions in a precursor protease corresponding to K170D, Y171Q and/or S173D of the *Bacillus amyloliquefaciens* subtilisin. The protease variant can be used in a cleaning composition (e.g. in detergents, in bar or liquid soap application, dish-care formulations, or contact lens cleaning solutions), in animal feed and for treating textiles (e.g. treating wool to prevent felting). The protease variant may also be used for peptide hydrolysis, waste treatment, cosmetic (e.g. skin care) formulations, or as fusion-cleavage enzymes in protein production. The proteins (including enzymes) with reduced antigenicity may be used with significantly less danger of sensitization for the individuals exposed. Peptides which contain epitopes responsible for initially sensitizing an individual may be identified by measuring the proliferation of T-cells due to T-cell epitope recognition.

PT A variant of a polypeptide of interest comprising an altered T-cell  
PT epitope to produce a different immunogenic response useful in  
PT therapeutics, vaccines, textile treatments and cosmetics -  
XX  
XX Example 2; Figure 6A; 54pp: English.

CC The invention relates to a variant of a polypeptide of interest  
CC comprising an altered T-cell epitope to produce a different immunogenic  
CC response. A method for altering the immunogenicity of a protein  
CC especially an enzyme, a hormone, a factor, a vaccine, or cytokine  
CC is described. The protein produces an immune response as desired and is  
CC useful in therapeutics, vaccines and in forming hyper and hypo-allergenic  
CC compounds, e.g. cleaning compositions, textile treatments, contact lens  
CC cleaning solutions, waste treatment products and cosmetic formulations.  
CC Unlike antibody assays, the method determines immune sensitivity to an  
CC epitope prior to any sensitisation taking place. AAU38518-AAU38742  
CC represent the amino acid sequences of Bacillus lentus savinase  
CC and human subtilisin (BPN) T-cell epitopes, and related  
CC amino acid sequences as described in the method of the invention.

CC The invention relates to a variant of a polypeptide of interest  
CC comprising an altered T-cell epitope to produce a different immunogenic  
CC response. A method for altering the immunogenicity of a protein  
CC especially an enzyme, a hormone, a factor, a vaccine, or cytokine  
CC is described. The protein produces an immune response as desired and is  
CC useful in therapeutics, vaccines and in forming hyper and hypo-allergenic  
CC compounds, e.g. cleaning compositions, textile treatments, contact lens  
CC cleaning solutions, waste treatment products and cosmetic formulations.  
CC Unlike antibody assays, the method determines immune sensitivity to an  
CC epitope prior to any sensitisation taking place. AAU38518-AAU38742  
CC represent the amino acid sequences of Bacillus lentus savinase  
CC and human subtilisin (BPN) T-cell epitopes, and related  
CC amino acid sequences as described in the method of the invention.

XX Multivalent immunogenic molecule comprising carrier with T cell  
PT epitope and many carbohydrate fragments with B cell epitopes;  
PT particularly for vaccination against meningitis and diagnosis  
XX  
XX Example 6; Page 53; 83pp; English.  
XX  
XX The present invention describes a multivalent immunogenic molecule (I)  
CC comprising: (i) carrier (Ia) having at least one functional T-cell  
CC epitope; and (ii) many different carbohydrate fragments (Ib), all linked  
CC to (Ia) and each having at least one functional B-cell epitope. (Ia)  
CC increases the immunogenicity of (Ib). AAY29819 to AAY29826 represent  
CC potential T-cell epitopes from meningococcal and pneumococcal proteins,  
CC used in the simplification of the present invention. (I) are used to  
CC generate an immune response, specifically for protective vaccination  
CC against meningitis (Streptococcus pneumoniae or Neisseria meningitidis),  
CC but also against tumour-related antigens and antigens from other  
CC bacteria, e.g. Escherichia coli, Salmonella typhi, Streptococcus mutans,  
CC Cryptococcus neoformans, Klebsiella, Staphylococcus aureus or  
CC Pseudomonas aeruginosa; to detect, by complex formation, (i) reactive  
CC antibodies and to raise (Ib)-specific antibodies, either for diagnostic  
CC detection of the corresponding antigen in usual immunoassays or, if  
CC directed against tumour antigens, for conjugation to anticancer agents.  
CC The combination of T- and B-cell epitopes in a single vaccine results  
CC in a strong and long-lasting humoral immunity.

PT Spatially-addressable set of single exon nucleic acid probes, used to  
PT measure gene expression in human lung samples -  
XX  
PS Claim 27; SEQ ID No 30317; 634bp; English.  
XX  
CC The invention relates to a spatially-addressable set of single exon  
CC nucleic acid probes for measuring gene expression in a sample derived  
CC from human lung comprising single exon nucleic acid probes having one of  
CC 12614 nucleic acid sequences mentioned in the specification, or their  
CC complements or the 12387 open reading frames derived from the 12614  
CC probes. Also included are a microarray comprising the novel set of  
CC probes; the novel set of probes which hybridize at high stringency to a  
CC nucleic acid expressed in the human lung; measuring gene expression in a  
CC sample derived from human lung, comprising (a) contacting the array with  
CC a collection of detectably labeled nucleic acids derived from human lung  
CC mRNA, and (b) measuring the labeled nucleic acids bound to each probe of  
CC the array; identifying exons in a eukaryotic genome, comprising  
CC (a) algorithmically predicting at least one exon from genomic sequences  
CC of the eukaryote; and (b) detecting specific hybridisation of detectably  
CC labeled nucleic acids from eukaryote lung mRNA, to a single exon probe,  
CC having a fragment identical to the predicted exon, the probe is included  
CC in the above mentioned microarray; assigning exons to a single gene,  
CC comprising (a) identifying exons from genomic sequence by the method  
CC above and (b) measuring the expression of each of the exons in several  
CC tissues and/or cell types using hybridisation to a single exon  
CC microarrays having a probe with the exon, where a common pattern of  
CC expression of the exons in the tissues and/or cell types indicates that  
CC the exons should be assigned to a single gene; a peptide comprising one  
CC of 12011 sequences, mentioned in the specification, or encoded by the  
CC probes/open reading frames (ORF). The probes are used for gene  
CC expression analysis, and for identifying exons in a gene, particularly  
CC using human lung derived mRNA and for the study of lung diseases  
CC such as asthma, lung cancer, chronic obstructive pulmonary disease  
CC (COPD), interstitial lung disease (ILD), familial idiopathic pulmonary  
CC fibrosis, neurofibromatosis, tuberous sclerosis, Gaucher's disease,  
CC Niemann-Pick disease, Hermansky-Pudlak syndrome, sarcoidosis, pulmonary  
CC haemosiderosis, pulmonary histiocytosis, lymphangioleiomyomatosis,  
CC pulmonary alveolar proteinosis, Karagener syndrome, fibrocystic  
CC pulmonary dysplasia, primary ciliary dyskinesia, pulmonary hypertension  
CC and hyaline membrane disease. The present sequence is a peptide/protein  
CC encoded by a single exon probe of the invention.  
CC Note: The sequence data for this patent did not form part  
CC of the printed specification, but was obtained in electronic  
CC format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

PT Single exon nucleic acid probes for analyzing gene expression in human  
PT hearts -  
XX  
PS Claim 15; SEQ ID No 24755; 530bp; English.  
XX  
CC The present invention relates to single exon nucleic acid probes for  
CC measuring human gene expression in a sample derived from human heart (see  
CC ABB21535-ABA1305). The present sequence is a protein encoded by one such  
CC probe. The probes may be used for predicting, measuring and displaying  
CC gene expression in samples derived from the human heart via microarrays.  
CC By measuring gene expression, the probes are useful for predicting,  
CC diagnosing, grading, staging, monitoring and prognosing diseases of the  
CC human heart and vascular system e.g. cardiovascular disease,  
CC hypertension, cardiac arrhythmias and congenital heart disease.  
CC Note: The sequence data for this patent did not form part of the printed

XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,  
 PT useful for preventing, diagnosing and/or treating cancers and  
 PT metastasis -  
 XX  
 PS Claim 11; SEQ ID NO 17820; 3071pp + Sequence Listing; English.  
 CC  
 CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)  
 CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytosolic  
 CC activity, and can be used in gene therapy and vaccine production. (I)  
 CC proteins and polynucleotides may be used in the prevention, diagnosis and  
 CC treatment of diseases associated with inappropriate (I) expression. For  
 CC example, they may be used to treat disorders associated with decreased  
 CC expression by rectifying mutations or deletions in a patient's genome  
 CC that affect the activity of (I) by expressing inactive proteins or to  
 CC supplement the patient's own production of (I). Additionally, (I)  
 CC polynucleotides may be used to produce the secreted (I), by inserting  
 CC the nucleic acids into a host cell and culturing the cell to express the  
 CC protein. (I) proteins and polynucleotides may be used to prevent,  
 CC diagnose and treat immune/haematopoietic-related diseases, especially  
 CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703  
 CC to AAK87694 represent human immune/haematopoietic antigen genomic  
 CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169  
 CC represent sequences used in the exemplification of the present invention.

 PT Novel isolated bacterial heme binding protein, Hemat-Hs or Hemat-Bs  
 PT which reversibly binds oxygen with low affinity, useful for controlled  
 PT storage of oxygen and for sensing gaseous ligands such as oxygen -

XX Disclosure; Page 16; 94pp; English.  
 PS  
 XX The present invention relates to isolated archael and bacterial haem  
 CC binding protein, Hemat-Hs or Hemat-Bs which reversibly binds oxygen  
 CC with low affinity. Haem binding protein is useful for controlled storage  
 CC of oxygen by allowing haem binding protein to bind and store oxygen, and  
 CC triggering the release of oxygen from haem binding protein by activating  
 CC the signalling domain. Haem binding protein is useful for sensing gaseous  
 CC ligands such as oxygen, NO, CO, or CN. Blood substitute comprising haem  
 CC binding protein is useful for treating a patient suffering from low  
 CC blood levels by administering and regulating the oxygen binding of the  
 CC haem-binding protein by modifying the signalling domain. Haem binding  
 CC protein is useful for haem-based catalysis, for artificial  
 CC photocynthesis and for identifying potential signalling functions of  
 CC mutated alpha-haemoglobin and myoglobin causing several diseases. The  
 CC present sequence is a haem protein related Roussetus aegyptiacus protein  
 CC fragment.

 XX New nucleic acid that is a 5' expressed sequence tag (5' EST) for  
 PT obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for  
 PT diagnostic, forensic, gene therapy and chromosome mapping procedures -  
 XX  
 PS Claim 13; SEQ ID 7453; 71pp + CD-ROM; English.  
 CC  
 CC The present sequence is a polypeptide encoded by one of a large number  
 CC of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs  
 CC were prepared from total human RNAs or polyA+ RNAs derived from 30  
 CC different tissues. EST sequences usually correspond mainly to the 3'  
 CC untranslated region (UTR) of the mRNA because they are often obtained  
 CC from oligo-dT primed cDNA libraries. Such ESTs are not well suited for  
 CC isolating cDNA sequences derived from the 5' ends of mRNAs and even in

CC those cases where longer cDNA sequences have been obtained, the full 5'  
CC UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5'  
CC ends and can therefore be used to obtain full length cDNAs and genomic  
CC DNA. 5' ESTs are also used in diagnostic, forensic, gene therapy and  
CC chromosome mapping procedures. They are used to obtain upstream  
CC regulatory sequences and to design expression and secretion vectors.

XX Example 1, SEQ ID No 3069, 1069pp; English.

XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic  
CC polypeptides. The proteins and their associated DNA sequences are used in  
CC the treatment, prevention and diagnosis of medical conditions caused by  
CC P. acnes. The disorders include SARHO syndrome (synovitis, acne,  
CC pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.  
CC P. acnes is also involved in infections of bone, joints and the central  
CC nervous system, however it is particularly involved in the inflammatory  
CC lesions associated with acne vulgaris. A method for detecting the  
CC presence or absence of P. acnes in a patient comprises contacting a  
CC sample with a binding agent that binds to the proteins of the invention  
CC and determining the amount of bound protein in the sample. The  
CC polypeptides may be used as antigens in the production of antibodies  
CC specific for P. acnes proteins. These antibodies can be used to  
CC downregulate expression and activity of P. acnes polypeptides and

CC therefore treat P. acnes infections. The antibodies may also be used as  
CC diagnostic agents for determining P. acnes presence, for example, by  
CC enzyme linked immunosorbent assay (ELISA).  
CC Note: The sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO  
CC at ftp.wipo.int/pub/published\_pct\_sequences.

XX Targeted hetero-association of recombinant proteins to  
XX multi-functional complexes - useful for therapeutic and diagnostic  
XX purposes

XX Example 4; Fig 17; 34pp; English.

XX Human apomyoglobin (aMG) can be used as an assembly device for  
CC the targeted hetero-association of recombinant proteins. The aMG  
CC is segmented into ALPHA (AAR95435), BETA (AAR95436) and GAMMA (AAR95437)  
CC segments encoded by Mro1-AscI-HindIII gene cassettes (AAT15269-71,  
CC respectively). Up to 6 functional domains (enzymes, antibody  
CC fragments, etc.) can be assembled by a 3-fold segmented structure,  
CC 3 at the N-termini and 3 at the C-termini of the segments. The  
CC presence of haem stabilises the native-like aMG fold and can be  
CC used as a switch to influence the association constant of the  
CC multi-functional complex.

 XX  
 CC The invention relates to novel human secreted polypeptides. The  
 CC polypeptides and antibodies to the polypeptides are useful for  
 CC determining the presence of or predisposition to a disease associated  
 CC with altered levels of polypeptide. The polypeptides are also useful for  
 CC identifying agents (agonists and antagonists) that bind to them. Cells  
 CC expressing the proteins are useful for identifying a therapeutic agent  
 CC for use in treatment of a pathology related to aberrant expression or  
 CC physiological interactions of the polypeptide. Vectors comprising  
 CC the nucleic acids encoding the polypeptides and cells genetically  
 CC engineered to express them are also useful for producing the proteins.  
 CC The proteins are useful in genetic vaccination, testing and  
 CC therapy, and can be used as nutritional supplements. They may be used to  
 CC increase stem cell proliferation; to regulate haematopoiesis; and in  
 CC bone, cartilage, tendon and/or nerve tissue growth or regeneration;  
 CC immune suppression and/or stimulation; as anti-inflammatory agents; and  
 CC in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.
